Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

Va. Reinforced concrete, 360x102 feet, 360x82 feet. Contract awarded Foundation Co., 120 Liberty street, New York.

## Proposals

**TREASURY DEPARTMENT**, Office of the Supervising Architect, Washington, D. C., April 16, 1924.—Sealed Proposals will be opened in this office at 3 P. M., May 14, 1924, for the construction of a one-story brick and tile non-fireproof Post Office building, approximately 61½ by 69 feet in size, at Woodbury, N. J. Drawings and specifications may be obtained from the Custodian of the site at Woodbury, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Charles H. Evans, of C. H. Evans Const. Co., 2315 Walnut Street, Philadelphia, has formed a corporation with J. Lyle Steele, to be known as Evans-Steele, Incorporated. The new concern will continue the general contracting and building business at 2315 Walnut Street, Philadelphia.

(Continued from page 276)

The whole question is, does society need the specialist? Does it need the financial ability and experience of the successful banker, or shall we let casual office holders manage our monetary institutions? Do we need the trained railway executive or shall the government operate our great transportation business with government employees? Do we need the men who have developed and managed our telegraph and telephone systems, or shall these be entrusted to the Democrats this year and to the Republicans next? And are the office holders of this country the proper agency for managing the nation's vast construction program or do we need the contractor?

We believe society does need this man who builds up a great fabric of experience and specialized skill and organization and holds it ready for responsible public services. We believe he is the orderly development of a sound economic system from which desirable conditions flow. Then let us not begrudge him his legitimate rewards,—meager enough on the average.

The contract method is time-honored and sound. It is based upon well established economic truths. Its competition develops low costs and enforces high efficiency. It furnishes the guarantees and responsibility upon which the safe financing of construction projects must rest. Such evils as it has from the public's point of view are not inherent in the method. They are solely the result of the failure of owners to demand skill, integrity and responsibility in their contractors.

But the day labor system is fundamentally unsound. It breeds dangerous politics, encourages inefficiency, lowers construction standards, develops extra-

vagance, decrease production, destroys individuality and lets loose that spirit of disloyalty to duty which notoriously during the war spread like a plague over the whole world. We all need the spur of competition. We all need to feel the pressure of definite responsibility. We all need the rewards of individual initiative and effort. America's splendid and amazing career fairly rests on that foundation. Listen to the words of that discouraged prophet of day labor and communism, Leon Trotsky, as they appeared recently in the *Literary Digest*. "Our nationalized industries, even those working under exceptionally favorable auspices and well equipped, all are working at a loss. Our administrators and directors are not real masters who attend to every little detail, who watch everything, who save every minute of time and every cent of money, who work day and night caring for the needs of our plants." The same false theory upon which day labor rests has benumbed the great soul of Russia and not even her vast resources, greater than our own, will restore her.

Now listen by contrast to the stirring words of the President of the Chamber of Commerce of the United States, Julius H. Barnes—with which I close.

"It is the American conviction that private enterprises and individual initiative are very precious things in national life which translate themselves into national progress."

"Consciously or unconsciously, American industry knows that its peculiar philosophy which stimulates the effort of the individual through assurance of a fair field and a secure reward for superior service has become the main spring of American accomplishment, and we will not permit unchallenged the loud spoken claims of those who would write into the American structure principles destructive of individual incentive and effort.

"Socialism leads to the easy theory of public service rendered without account of cost."

"We should not remain silent when theorists in public life propose to displace the sturdy philosophy of individual accomplishment with the easy social theory of the cars of the State, without that responsibility."

"If we can read intelligently the lesson of our National progress, a progress which after all is only the aggregate of individual effort stimulated by fairness of opportunity and sureness of reward, then America may face the future without misgiving."

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building news magazine this side of Manhattan Island.

## ***A Builder Carries Many Risks***

More than he would like, as a rule. There is one he need not assume. That is the fire risk. Always present, yes, but adequate insurance will cover the danger of loss.

Ask for a North America Builders' Risk Policy. It is sound indemnity.

You Can Heat Water Better  
with Gas — Most Efficiently with

BRYANT AUTOMATIC  
Hot  Water  
STORAGE SYSTEMS

The Bryant System is *unapproached* in ability to put a large percentage of the available heat into the water and *unequalled* in all 'round service.

It embodies: *capacity* to meet demands in excess of maximum requirements; a principle which maintains the initial pressure until all faucets are turned off, and *dependability* based on simple, rugged construction.

*It is, in every respect, a system that is far above the average and equal to the most severe demands placed upon it.*

## Here's the range for kitchenettes!

Although only 38 inches long, the Round Oak Gas Range (type D) provides a full 16-inch oven, a large broiler, a four-hole cooking top, and a *compartment for pots and pans*, ample for a family of five. This strongly built range also has the famous Round Oak "four-way"

circulating oven principle that saves gas bill money. It's attractively finished and easy to clean. For prices and further information phone or write—

## LINOTILE FLOORS

### Have Character

Unusually effective designs are obtained with Armstrong's Linotile Flooring. As its name indicates Linotile is tile made and laid in separate units, and not being supplied in sheets or in set patterns is capable of wide expression in design.

But aside from the effective designs, Linotile is

Resilient  
Non-slippery  
Silent underfoot  
Warm  
Sanitary

Easy to clean  
Odorless  
Artistic  
Durable  
Reasonable in cost

We shall be glad to give you full details of the wonderful possibilities of Linotile as a flooring for residences, banks, offices, public buildings, etc.

Connolly, 1404 North Eighteenth street, Philadelphia, Item 1, \$56,444; Item 2, \$36,998; Item 3, \$15; Item 4, \$2.

### Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., April 29, 1924. Sealed Proposals will be opened in this office at 2 P. M., May 21, 1924, for the construction of an extension to look-out galleries in the United States Post Office at Buffalo, N. Y. Drawings and specifications may be obtained from the Custodian of the building, or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### Advertisement for Construction of Dormitory Building for the N. J. School for the Deaf, Trenton Junction, N. J.

Sealed proposals for furnishing labor and materials to construct a Dormitory Building for Boys as shown on the Plot Plan, on the grounds of the School for the Deaf, Trenton Junction, N. J., will be received and opened by the Architects at the State House, Trenton, N. J., Wednesday, May 28th, 1924, at 2.30 o'clock P. M. (Daylight Saving Time.)

Full information regarding the work to be done and the bids to be received can be obtained from the Architects.

Copies of the drawings and specifications are on file at the office of the Architects and a limited number of these copies will be loaned to prospective bidders upon deposit of a certified check to the order of the Architect for the sum of fifty dollars (\$50).

## A TRIBUTE

THAT this beautiful new Park Avenue Baptist Church, New York City, famed for the wealth of its congregation, should have the Novelty Carburetor Boiler, is one of the highest possible tributes to this remarkable heating apparatus.

This wonderful boiler is now operating in every type of building in all sections of the country, burning all grades and sizes of hard coal or soft coal without smoke. In the self-adjusting carburetor chamber all smoke, gases and carbon, ordinarily wasted, are mixed with oxygen from the air and burned. Thus greater heat is obtained without increasing fuel.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## As The Editor Sees It

### WHY DEPARTMENT STORES BURN

Small indeed is the American community which does not boast at least one so-called department store. Therefore, why these establishments, many of them, burn every year, and how they can be saved from falling a prey to the flames, should be matters of somewhat more than casual interest alike to their proprietors and patrons.

In the three-year period of 1919-1921 no less than a \$28,999,897 total loss was recorded on the contents alone in this occupancy, the number of claims received by the Actuarial Bureau of The National Board of Fire Underwriters being 6,330. There was, then, throughout the three years, an average of about six department store fires every day, with a mean loss for each of \$4,581.

It would not be strictly accurate, perhaps to call a department store a public institution, as that term is applied to hospitals and schools and hotels. Still, the paramount concern—obligation, in fact—in the erection and maintenance of department stores, as with these other occupancies, should be safety to life. It hardly needs to be said that the department store, at certain seasons, notably at Christmas time and during the winter months generally, as well as when special sales are being held, is a mecca for great crowds of shoppers, among whom women and children invariably predominate.

Some of the country's largest department stores at such times house more people in proportion to floor areas than any other type of structure; and stocks, too, are then at their heaviest, which further increases the danger. Shoppers, as a rule, are intent upon the business in hand and are giving not the remotest thought to the prospect of fire; they tacitly assume, and have every right to expect, that the management has considered the possibility of fire and has done everything in its power to protect the lives of customers. Yet, it is to be feared that this confidence is not always justified by the facts, although in the larger cities conditions are slowly improving under the compulsion of stricter fire and building laws.

#### *Should be Safe to Occupy*

It is of obvious importance so to design a building that the completed structure will be not merely safe to leave but safe to occupy. This is entirely logical. What, for example, would be thought of a modern city which did not maintain adequate police protection for its inhabitants but instead devised elaborate plans for effecting their escape in case the town were visited by a band of marauders? Absurd as such a situation would be, it is not more so than to erect a building in which exits take the place of fire proof construction and adequate fire protection.

First of all, then, the department store should be constructed originally to resist

fire. If there is close exposure, its exterior openings, doors and windows, should be protected against flames and heat originating beyond the premises. Such protection may be fire shutters and doors and wired glass in metal frames or else the latter in conjunction with outside sprinklers. Thus will the initial step be taken to remove the chief hazard in this occupancy, *Exposure*, or communicated fire, which in 1919-1921 exacted from department stores a toll of \$6,521,232 a figure greatly in excess of the loss from any other cause.

Nothing in the above, however, should be construed as belittling the value of adequate exit facilities; they should be provided as a matter of course, in proper number and with due regard to location, not forgetting the basement, which is so often the scene of fire that independent stairways leading directly to the street have become virtually a necessity.

#### *Why Exit Problem is Difficult*

Schools, hospitals, theatres and similar places of public resort have made more or less fixed limits of attendance or occupancy. A department store, on the contrary, has no means of ascertaining with definiteness the number of people that may be under its roof at any given time. This difference is fundamental, and it tends to complicate the problem of evacuating department stores in an emergency. Usually, though, the maximum capacity of the aisles is known—in one

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

store of country-wide reputation it is 15,000 persons—and this provides a basis for calculating both the number and position of exits. Exits on each floor should be widely separated and plainly marked; they must suffice to empty the building not only of the average, but of the maximum, crowd.

And this must be done with all possible speed. The Committee on Safety to Life of the National Fire Protection Association holds that it should be possible to evacuate the poorest retail structures in two or three minutes; and the best, that is, fireproof buildings, in eight or ten minutes, via elevators, inside stairways, and smoke-proof towers. Fire protection engineers differ on this point, however, many maintaining that, since it is the burning contents, rather than the ignited structure, that constitute the danger to life during the first few minutes, the potential speed of evacuation should be as high for good as for poor construction.

The means of ultimate egress, street doors, should be commensurate in number, width and location with the interior exit channels since nothing will more conduce to panic conditions in event of fire than a milling jam about street doors after upper stories have been expeditiously cleared. The revolving door is apparently the next thing to an operating necessity for the department store, although it is true that many leading establishments do not employ it. Where it is used, it should be of the collapsible type, giving way under slight pressure, and a reasonable proportion, at least, of the total door capacity ought to be of the ordinary type, swinging outward. Exterior fire escapes, if of the stair type, are valuable as supplementary exits; they should never be the main reliance.

#### *Checking Interior Spread of Fire*

Great heights and enormous floor areas combine to render department stores especially susceptible to vertical and lateral spread of fire and smoke within the building. Much of the danger from vertical spread can be eliminated by inclosing all natural arteries of such distribution—elevator and dumb-waiter shafts, stairways, artificial ventilating systems, package and rubbish chutes—and so confine the blaze to the floor of inception or, at least, retard its upward sweep. In many stores open light wells or even vast rotundas run from main floor to roof. These may be inclosed at each floor above the ground with partitions of polished wired glass in such a manner as to detract neither from their appearance nor their serviceability while materially reducing their hazard as smoke and flame conductors.

Not so readily controlled, however, is the lateral spread of flames, since exten-

sive floor spaces seem to be required for the economical and attractive display of merchandise, and to enhance inter-departmental accessibility. If there are no fire-walls the danger thus presented of horizontal sweep can be lessened by the use of automatic sprinklers. In few occupancies is the provision of standard automatic sprinklers, kept constantly in working order, more vital. Every department store, irrespective of size or construction, should be sprinklered, for while the building itself may be fire-resistant most of the contents emphatically are not. Interior fire-walls, however, with approved self-closing hollow metal or metal-clad doors, and also standard wired glass partitions, have demonstrated their value so many times that, in designing a new department store building, they may well be introduced even at some sacrifice of operating convenience. So much, in outline, for construction.

The most serious originating cause of fire in department stores is *Matches-Smoking*. To what already has been endlessly reiterated about America's principal fire hazard little can be added here. Even with the strictest enforcement of rules against smoking by employees—except, perhaps, in some designated and carefully safeguarded place—there remains the problem of the occasional customer who may enter the store with a lighted cigarette or cigar. Where city ordinances prohibit smoking in these circumstances, it is easily solved; elsewhere, every department store itself should discourage the practice by posting prominently—and courteously calling attention to them, if need be—"No Smoking" signs.

Second only to *Matches-Smoking* as a fire cause is *Stoves, Furnaces, Boilers and Their Pipes*. This hazard, of course, is related both to installation and maintenance of heating plants. To begin with, the furnace room in department stores should be completely isolated from the rest of the basement by fire-walls and approved self-closing hollow metal or metal-covered doors. Where ample ground surrounds the store a separate fire-proof building to house the furnace will provide the greatest safety. All woodwork in the immediate vicinity of furnaces and pipes requires proper shielding, either asbestos or metal being suitable for the purpose. The pipes themselves should be insulated, not alone for safety but to conserve heat by preventing wasteful diffusion. The furnace ought to be periodically inspected for defects, and the attendant, whether a janitor or other employe, should understand fully the dangers of overheating. Such warnings as to these seem, perhaps, childishly obvious yet the record stands as proof indisputable to the contrary.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.

## Proposals

### Advertisement for Construction of Dormitory Building for the N. J. School for the Deaf, Trenton Junction, N. J.

Sealed proposals for furnishing labor and materials to construct a Dormitory Building for Boys as shown on the Plot Plan, on the grounds of the School for the Deaf, Trenton Junction, N. J., will be received and opened by the Architects at the State House, Trenton, N. J., Wednesday, May 28th, 1924, at 2.30 o'clock P. M. (Daylight Saving Time.)

Full information regarding the work to be done and the bids to be received can be obtained from the Architects.

Copies of the drawings and specifications are on file at the office of the Architects and a limited number of these copies will be loaned to prospective bidders upon deposit of a certified check to the order of the Architect for the sum of fifty dollars (\$50).

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## "It's just what we've wanted"

That's what housewives with small kitchens say of the Round Oak Gas Range (type D). Providing a compartment for pots and pans this improved range serves as both stove and kitchen cabinet. Only 38 inches long yet it has a full 16-inch oven and four-hole cooking top. Its

patented four-way circulating oven means perfect baking with minimum gas. For prices and other information write—

A cast iron sectional, side-feed, up-draft, low water line smokeless boiler. Easy to install, simple to operate, exceptionally durable.

Made small enough for the home—large enough for churches, schools, theatres, office buildings, warehouses and factories.

JAMES MADISON SCHOOL, NORFOLK, VA.

Architects, Neff & Thompson, Norfolk, Va.

Heating Contractors, Billips & Pickard, Norfolk, Va.

Four Novelty Carburetor Boilers with Dunham System are used in this school, heating 32 classrooms, 1 auditorium and 350 feet of corridors.

## CAST IRON BOILERS

### Solve School Heating Problems

The Smokeless feature of the Novelty Carburetor Boiler permits burning the cheaper grades of soft coal without prohibited smoke, thus furnishing heat at small expense.

## PROPOSAL

### FOR COUNTY BUILDING

Pursuant to a resolution of the Board of Chosen Freeholders of Gloucester County, N. J., notice is hereby given that the Building Committee of the said Board of Chosen Freeholders will receive sealed proposals in the Freeholders' Room at the Court House in the City of Woodbury, Gloucester County, New Jersey, on the 12th day of June, 1924, at 10 A. M. (Eastern Standard Time) for the construction of a **STONE, BRICK AND REINFORCED CONCRETE COUNTY BUILDING**, located on Delaware St., in said city of Woodbury, N. J.

Said work shall be done and materials furnished in strict and entire conformity with the plans and specifications prepared by Charles R. Peddle, Architect, and now on file, with the Clerk of this Board, at his office, Merritt Block, Cooper Street, Woodbury, New Jersey.

A copy of said plans and specifications may be obtained from Charles R. Peddle, Architect, 136 South Fourth Street, Philadelphia, Pa., by making a deposit of \$50.00 on the same, to be returned when plans and specifications are returned.

A certified check, payable to the County of Gloucester, for two per centum of the amount of the bid must accompany each and every proposal, the same to be forfeited to the said County of Gloucester should the bidder be awarded the contract and fail to execute the said contract and approved bond as provided in the specifications.

Each bid shall also be accompanied with a certificate of the bidder showing that he or his sub-contractors owns or controls all the

necessary equipment for doing said work, and also a certificate from a surety company, authorized to do business in this State, stating that said surety company will provide the bidder with a bond in such sum as required by said specifications, should he be awarded the contract.

Every proposal, including the certified check and certificates heretofore referred to, shall be sealed, and the name of the bidder endorsed thereon, and shall be plainly marked "Bid for the Erection of County Building," and filed with the undersigned, or the Clerk of the Board of Chosen Freeholders, on or before the time heretofore stated, at which time the bids will be opened and publicly read.

The Board of Chosen Freeholders reserve the right to reject any and all bids and to waive any irregularities and to decide as to the responsibility of the bidder.

WM. A. LACEY,  
FRANK L. POTE,  
J. RUSSELL TREAT,  
Committee.

Dated Woodbury, N. J., May 14th, 1924.

### FOR CELL AND JAIL WORK

Pursuant to a resolution of the Board of Chosen Freeholders of Gloucester County, N. J., notice is hereby given that the Building Committee of the said Board of Chosen Freeholders will receive sealed proposals in the Freeholders' Room at the Court House in the City of Woodbury, Gloucester County, New Jersey, on the 12th day of June, 1924, at 10 A. M. (Eastern Standard Time), for the Complete Installation of **CELL AND JAIL WORK** in a Stone, Brick and Reinforced Concrete County Building located on Delaware Street in the said City of Woodbury, N. J.

Said work shall be done and materials furnished in strict and entire conformity with the plans and specifications prepared by Charles R. Peddle, Architect, and now on file, with the Clerk of this Board, at his office, Merritt Block, Cooper Street, Woodbury, New Jersey.

A copy of said plans and specifications may be obtained from Charles R. Peddle, Architect, 136 South Fourth Street, Philadelphia, Pa., by making a deposit of \$25.00 on the same, to be returned when plans and specifications are returned.

A certified check payable to the County of Gloucester, for ten per centum of the amount of the bid, must accompany each and every proposal, the same to be forfeited to the said County of Gloucester, should the bidder be awarded the contract and fail to execute the said contract and approved bond as provided in the specifications.

Each bid shall also be accompanied with a certificate of the bidder showing that he owns or controls all the necessary equipment for doing said work, and also a certificate from a surety company, authorized to do business in this State, stating that said surety company will provide the bidder with a bond in such sum as required by said specifications, should he be awarded the contract.

Every proposal, including the certified check and certificates heretofore referred to, shall be sealed, and the name of the bidder endorsed thereon and shall be plainly marked "Bid for the Complete Installation of Cell Work in County Building" and filed with the undersigned, or the Clerk of the Board of Chosen Freeholders, on or before the time heretofore stated, at which time the bids will be opened and publicly read.

The Board of Chosen Freeholders reserve the right to reject any and all bids and to waive any irregularities and to decide as to the responsibility of the bidder.

WM. A. LACEY,

FRANK L. POTE,  
J. RUSSELL TREAT,  
Committee.

Dated Woodbury, N. J., May 14th, 1924.

#### FOR HEATING

Pursuant to a resolution of the Board of Chosen Freeholders of Gloucester County, N. J., notice is hereby given that the Building Committee of the said Board of Chosen Freeholders will receive sealed proposals in the Freeholders' Room at the Court House in the City of Woodbury, Gloucester County, New Jersey, on the 12th day of June, 1924, at 10 A. M. (Eastern Standard Time), for the installation of a HEATING SYSTEM, to be installed in a Stone, Brick and Reinforced Concrete County Building located on Delaware Street in the said City of Woodbury, N. J.

Said work shall be done and materials furnished in strict and entire conformity with the plans and specifications prepared by Charles R. Peddle, Architect, and now on file, with the Clerk of this Board, at his office, Merritt Block, Cooper Street, Woodbury, New Jersey.

A copy of said plans and specifications may be obtained from Charles R. Peddle, Architect, 136 South Fourth Street, Philadelphia, Pa., by making a deposit of \$50.00 on the same, to be returned when plans and specifications are returned.

A certified check payable to the County of Gloucester, for ten per centum of the amount of the bid, must accompany each and every proposal, the same to be forfeited to the said County of Gloucester, should the bidder be awarded the contract and fail to execute the said contract and approved bond as provided in the specifications.

Each bid shall also be accompanied with a certificate of the bidder showing that he owns or controls all the necessary equipment for doing said work, and also a certificate from a surety company, authorized to do business in this State, stating that said surety company will provide the bidder with a bond in such sum as required by said specifications, should he be awarded the contract.

Every proposal, including the certified check and certificates heretofore referred to, shall be sealed, and the name of the bidder endorsed thereon and shall be plainly marked "Bid for the Installation of a Heating System in the County Building" and filed with the undersigned, or the Clerk of the Board of Chosen Freeholders, on or before the time heretofore stated, at which time the bids will be opened and publicly read.

The Board of Chosen Freeholders reserve the right to reject any and all bids and to waive any irregularities and to decide as to the responsibility of the bidder.

WM. A. LACEY,  
FRANK L. POTE,  
J. RUSSELL TREAT,  
Committee.

Dated Woodbury, N. J., May 14th, 1924.

#### FOR ELEVATOR

Pursuant to a resolution of the Board of Chosen Freeholders of Gloucester County, N. J., notice is hereby given that the Building Committee of the said Board of Chosen Freeholders will receive sealed proposals in the Freeholders' Room at the Court House in the City of Woodbury, Gloucester County, New Jersey, on the 12th day of June, 1924, at 10 A. M. (Eastern Standard Time), for the complete installation of an ELECTRIC ELEVATOR in a Stone, Brick and Reinforced Concrete County Building located on Delaware Street in the said City of Woodbury, N. J.

Said work shall be done and materials furnished in strict and entire conformity with

the plans and specifications prepared by Charles R. Peddle, Architect, and now on file, with the Clerk of this Board, at his office, Merritt Block, Cooper Street, Woodbury, New Jersey.

A copy of said plans and specifications may be obtained from Charles R. Peddle, Architect, 136 South Fourth Street, Philadelphia, Pa., by making a deposit of \$25.00 on the same, to be returned when plans and specifications are returned.

A certified check payable to the County of Gloucester, for 15 per centum of the amount of the bid, must accompany each and every proposal, the same to be forfeited to the said County of Gloucester, should the bidder be awarded the contract and fail to execute the said contract and approved bond as provided in the specifications.

Each bid shall also be accompanied with a certificate of the bidder showing that he owns or controls all the necessary equipment for doing said work, and also a certificate from a surety company, authorized to do business in this State, stating that said surety company will provide the bidder with a bond in such sum as required by said specifications, should he be awarded the contract.

Every proposal, including the certified check and certificates heretofore referred to, shall be sealed, and the name of the bidder endorsed thereon and shall be plainly marked "Bid for the Complete Installation of an Electric Elevator in County Building" and filed with the undersigned, or the Clerk of the Board of Chosen Freeholders, on or before the time heretofore stated, at which time the bids will be opened and publicly read.

The Board of Chosen Freeholders reserve the right to reject any and all bids and to waive any irregularities and to decide as to the responsibility of the bidder.

WM. A. LACEY,  
FRANK L. POTE,  
J. RUSSELL TREAT,  
Committee.

Dated Woodbury, N. J., May 14th, 1924.

#### FOR ELECTRIC WORK

Pursuant to a resolution of the Board of Chosen Freeholders of Gloucester County, N. J., notice is hereby given that the Building Committee of the said Board of Chosen Freeholders will receive sealed proposals in the Freeholders' Room at the Court House in the City of Woodbury, Gloucester County, New Jersey, on the 12th day of June, 1924, at 10 A. M. (Eastern Standard Time), for the installation of the ELECTRICAL WORK in a Stone, Brick and Reinforced Concrete County Building located on Delaware Street in the said City of Woodbury, N. J.

Said work shall be done and materials furnished in strict and entire conformity with the plans and specifications prepared by Charles R. Peddle, Architect, and now on file, with the Clerk of this Board, at his office, Merritt Block, Cooper Street, Woodbury, New Jersey.

A copy of said plans and specifications may be obtained from Charles E. Peddle, 136 South Fourth street, Philadelphia, Pa., by making a deposit of \$25.00 on the same, to be returned when plans and specifications are returned.

A certified check payable to the County of Gloucester, for ten per centum of the amount of the bid, must accompany each and every proposal, the same to be forfeited to the said County of Gloucester, should the bidder be awarded the contract and fail to execute the said contract and approved bond as provided in the specifications.

Each bid shall also be accompanied with a certificate of the bidder showing that he owns or controls all the necessary equipment for doing said work, and also a certificate

from a surety company, authorized to do business in this State, stating that said surety company will provide the bidder with a bond in such sum as required by said specifications, should he be awarded the contract.

Every proposal, including the certified check and certificates heretofore referred to, shall be sealed, and the name of the bidder endorsed thereon and shall be plainly marked "Bid for the Installation of the Electrical Equipment in the County Building," and filed with the undersigned, or the Clerk of the Board of Chosen Freeholders, on or before the time heretofore stated, at which time the bids will be opened and publicly read.

The Board of Chosen Freeholders reserve the right to reject any and all bids and to waive any irregularities and to decide as to the responsibility of the bidder.

J. RUSSELL TREAT,  
Committee.

Dated Woodbury, N. J., May 14th, 1924.

#### FOR PLUMBING

Pursuant to a resolution of the Board of Chosen Freeholders of Gloucester County, N. J., notice is hereby given that the Building Committee of the said Board of Chosen Freeholders will receive sealed proposals in the Freeholders' Room at the Court House in the City of Woodbury, Gloucester County, New Jersey, on the 12th day of June, 1924, at 10 A. M. (Eastern Standard Time), for the installation of the PLUMBING WORK in a Stone, Brick and Reinforced Concrete County Building located on Delaware Street in the said City of Woodbury, N. J.

Said work shall be done and materials furnished in strict and entire conformity with the plans and specifications prepared by Charles R. Peddle, Architect, and now on file, with the Clerk of this Board, at his office, Merritt Block, Cooper Street, Woodbury, New Jersey.

A copy of said plans and specifications may be obtained from Charles R. Peddle, Architect, 136 South Fourth Street, Philadelphia, Pa., by making a deposit of \$50.00 on the same, to be returned when plans and specifications are returned.

A certified check payable to the County of Gloucester, for ten per centum of the amount of the bid, must accompany each and every proposal, the same to be forfeited to the said County of Gloucester, should the bidder be awarded the contract and fail to execute the said contract and approved bond as provided in the specifications.

Each bid shall also be accompanied with a certificate of the bidder showing that he owns or controls all the necessary equipment for doing said work, and also a certificate from a surety company, authorized to do business in this State, stating that said surety company will provide the bidder with a bond in such sum as required by said specifications, should he be awarded the contract.

Every proposal, including the certified check and certificates heretofore referred to, shall be sealed, and the name of the bidder endorsed thereon and shall be plainly marked "Bid for the Installation of the Plumbing Equipment in the County Building," and filed with the undersigned, or the Clerk of the Board of Chosen Freeholders, on or before the time heretofore stated, at which time the bids will be opened and publicly read.

The Board of Chosen Freeholders reserve the right to reject any and all bids and to waive any irregularities and to decide as to the responsibility of the bidder.

WM. A. LACEY,  
FRANK L. POTE,  
J. RUSSELL TREAT,  
Committee.

Dated Woodbury, N. J., May 14th, 1924.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

David Lutz, for twelve years associated with the leading building contractors in Philadelphia, has formed a company under the name of David Lutz & Company, Incorporated, and has opened offices at the N. E. Cor. 23rd and Chestnut Streets, Philadelphia, where the company will do general building and contracting business.

The company is desirous of having catalogues on building materials and devices mailed to the above address.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

## Proposals

**TREASURY DEPARTMENT,** Office of the Supervising Architect, Washington, D. C., May 15, 1924. Sealed Proposals will be opened in this office at 3 P. M., June 12, 1924, for the construction, including mechanical equipment, of a one-story concrete and brick non-fireproof Post Office Building, approximately 60 by 95 feet, at Dubois, Pa. Drawings and specifications may be obtained from the Custodian of the site at Dubois, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT,** Office of the Supervising Architect, Washington, D. C., May 12, 1924. Sealed Proposals will be opened in this office at 3 P. M., June 18, 1924, for the construction, including mechanical equipment, of a one-story brick and tile non-fireproof Post Office Building (approximately 88 by 55 feet) at Salisbury, Md. Drawings and specifications may be obtained from the Custodian of the site at Salisbury, Md., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## NOTICE TO BIDDERS

Sealed Bids will be received by the Camden County Board of Chosen Freeholders for the complete installation of Electric Work (excepting lighting fixtures) in and about a group of buildings for the Camden County Tuberculosis Hospital, Asyla, N. J.

Drawings and specifications may be seen and all information obtained by application to the office of Arnold H. Moses, A. I. A., Architect, 412 Temple Building, Camden, N. J., or to Frank H. Schaefer, Consulting Mechanical Engineer, Temple Building, Camden, N. J.

Bids will be received on the 5th day of June, 1924, at 2 o'clock P. M., Daylight Saving Time (1 o'clock P. M., Standard Time).

**TREASURY DEPARTMENT,** Office of the Supervising Architect, Washington, D. C., May 20, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., June 6, 1924, for restoration of stone work, new roof, gutters, downspouts, etc., for the United States Post Office and Custom House, at Oswego, N. Y. Drawings and specifications may be obtained from the Custodian at Oswego, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT,** Office of the Supervising Architect, Washington, D. C., May 20, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., June 13, 1924, for remodeling at the United States Post Office at Greensburg, Pa. Drawings and specifications may be obtained from the Custodian at Greensburg, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT,** Office of the Supervising Architect, Washington, D. C., May 21, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., June 16, 1924, for the construction of a non-fireproof extension (one story and 30 feet x 30 feet in plan) to the Parcel Post Annex at the United States Post Office, Scranton, Pa., including mechanical equipment and incidental altera-

tions and repairs. Drawings and specifications may be obtained from the Custodian of the building or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT,** Office of the Supervising Architect, Washington, D. C., May 22, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., June 17, 1924, for the construction of a retaining wall, 42 feet long, at the United States Post Office at Altoona, Pa. Drawings and specifications may be obtained from the Custodian of the building or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## ANNUAL SPRING OUTING OF THE BUILDERS' EXCHANGE AT CEDAR- BROOK COUNTRY CLUB MAY 22

More than two hundred members of the Philadelphia Builders' Exchange and Employers' Association attended the Annual Spring Outing and Planked Shad Dinner of the Exchange at Cedarbrook Country Club last Thursday afternoon, May 22nd. The afternoon was spent in playing golf, baseball and other games. More than fifty members participated in a round or more of golf, and prizes were awarded for the low metal scores. The first prize of a dozen golf balls went to Thomas M. Cooper of the Utica Heater Company, who turned in a score of 73. The second prize went to F. M. Robinson, general manager of the Crane Company. The third prize went to W. C. Norwood, of the Bastian-Morley Company, who tied with George D. Van Seiver with a score of 78 and won the toss for the prize when the coin was flipped.

The baseball game was engineered by John Pruss, of the Kuehnle Shop, and was a distinct success. The game was between the sub-contractors and the general contractors. C. Albert Kuehnle was pitcher for the sub-contractors. William M. Anderson was umpire, and his decisions were satisfactory, except for a dispute when he called Kuehnle out at second. John S. McQuade met with a serious accident which did not extend deeper than his clothing. The fellows all had a good time, and we will long remember the baseball game at Cedarbrook.

At six o'clock the members sat down to a Planked Shad Dinner, which was right up to the reputation of the Club, followed by an entertainment of vaudeville which lasted an hour and a quarter.

The members were delighted with the afternoon's outing which gave all an opportunity to get better acquainted and to transact a little business on the side.

**Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.**

**"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.**

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

### ANNOUNCEMENT OF THE PHILADELPHIA CERTIFICA- TION PROGRAM FOR REC- OGNIZING AND ENCOUR- AGING CRAFTSMANSHIP

By the Philadelphia Building Congress

**R**ECOGNIZING the character and long established good name which Philadelphia has acquired as the cradle of liberty, the city of homes and the workshop of the world—a reputation which would be impossible without the fine part taken by its architects, engineers, builders, construction workers, and others of financial and allied interests who have given this city Independence Hall and its other enduring historical monuments, its city and suburban homes, its industrial establishments, office buildings, hotels, places of public assemblage and other structures and public utilities, and

Recognizing that in all such work the enjoyment, comfort, health and safety of the people depend upon the ability of the architect to design and properly plan attractive and economically sound buildings; the skill of the engineer to provide for their structural safety and equipment; the integrity and experience of the builder and the contractor to construct; and the pride of craft, interest and efficiency of the workers to render service, both "skilled" and "unskilled," and

Recognizing the precedent set by the

earlier buildings and structures in Philadelphia and its environs, and the revival which set in with the 20th Century, after the stimulus given by the Centennial Exhibition, the Columbian Exposition, and other contributing causes, and

Desiring to encourage and to preserve for all time, in Philadelphia and its metropolitan area, the true spirit of craftsmanship, to give recognition to those whose skill, patience and toil have built the community well, and to retain permanently as citizens those who will continue their useful work, improve with experience and broaden through contact with all elements in the industry, thus stimulating others to follow their example.

*It is hereby announced, that,*

The Philadelphia Building Congress, for the remainder of the current year, in co-operation with all bodies having the desire to encourage a better appreciation of good architecture, sound construction, pride in craft, interest in work and efficiency in production, will make a broad survey of construction activities and personnel in order to ascertain:

The names and addresses of all field workers in the building industry (as distinguished from shop workers engaged in the manufacture of building materials) who are qualified to perform and are performing satisfactory services in their respective crafts or in related lines of work.

The names and addresses of all builders, sub-contractors, or other employers who encourage such workers and afford them opportunities to do their best or to improve themselves.

The names and addresses of all architects and engineers who encourage their co-workers in the service of owners and the community to become better craftsmen or workers.

*And it is further announced, that,*

The Philadelphia Building Congress will cause to be issued engrossed certificates dated January 1st, 1925, endorsed by its officers and properly qualified committees, as follows:

**Craftsmen.** To those, now designated by various names, such as Mechanics, Artisans, Skilled Workers, etc., who in any building craft have shown skill, ability, efficiency, willingness and the desire to improve their own knowledge and technique as well as that of fellow workers, helpers or apprentices.—*a Certificate as a Craftsman.*

**Assistant Craftsman.** To those, now designated as Improvers, Helpers, etc., who give indication of the proper qualifications and the desire to become craftsmen, or to those who are satisfactorily completing terms of apprenticeship, and have shown the characteristics described in the preceding paragraph,—*a Certificate as an Assistant Craftsman.*

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 2619

**BLUE  
PRINTS**

*Junior Craftsman.* To those, now designated as Apprentices, Learners, etc., who, after satisfactory completion of such terms as shall be deemed sufficient, indicate the characteristics described in the first paragraph,—a *Certificate* as a *Junior Craftsman*.

*Guildsman.* To those engaged in any of the Crafts, who have shown especial skill in developing the artistry or handicraft possibilities in their particular field of work, such as designing, laying off, modeling, carving, wrought-work, and have given visible evidences of individuality,—a *Certificate* as a *Guildsman*.

*Architects and Engineers.* To those, who having designed, specified and supervised buildings which have been successfully erected, who have shown knowledge of appropriateness of design with the most advantageous use of materials, who have encouraged pride of craft on the part of co-workers and have given individual recognition of it when deserved,—a *Certificate* as a *Master Craftsman*.

*Builders and Sub-contractors.* To those, who have satisfactorily either erected buildings or other structures or parts thereof, or installed equipment therein, and have encouraged pride of craft on the part of co-workers and have given individual recognition of it when deserved,—a *Certificate* as a *Co-operating Master Craftsman*.

The award of all such certificates shall be made, upon due knowledge of ascertainable facts, as soon as practical after the end of the current year. Awards shall be made, in each class, upon evidence of sufficient merit and in an individual capacity without regard as to whether or not the recipient is affiliated with any organization, association or other group. Each certificate shall be non-transferable and shall be superseded by another certificate, if the same recipient is, at the end of the next succeeding year, considered to be again entitled to a certificate, either in the same or another class.

It is hoped that the success of this program will be such as to warrant consideration of,

*Workmen.* To those, now designated as Common Laborers, Unskilled Laborers, or "Helpers," etc., who have shown aptitude, efficiency, willingness, and the desire to successfully perform their allotted task with better understanding of its relation to the work of others,—a *Certificate* as a *Construction Workman*.

Further detailed announcements will be made from time to time. Meanwhile the co-operation of everyone interested, including the public, is earnestly desired, in the furtherance of this Philadelphia Craftsmanship Certificate Program. All suggestions or other communications should be addressed to

Philadelphia Building Congress,  
D. Knickerbacker Boyd, President,  
704 Otis Building, Philadelphia.

Approved by the Executive Committee.  
(Attest) R. C. Kramer, Secretary.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Many a man would do a better job if he didn't know about putty.—Ex.

LACKAWANNA (N. Y.) HIGH SCHOOL  
Equipped with Two No. 12-40 Novelty Carburetor Steam Boilers.  
Chairman of Board: Nicholas Eagan.  
Heating Engineers: Power Efficiency Co., Buffalo.  
Architect for Lackawanna: Neal M. Dunning, Buffalo.

## Assurance Trebly Sure

Five years ago the School Board of Lackawanna, N. Y., approved the installation of two Novelty Carburetor Boilers for School No. 3, because they believed this newest patent boiler to be an economical heating system.

After observing actual results for three years, the Board decided to install similar equipment in the High School to replace the warm air heating system. Again two No. 12-40 Novelty Carburetor Boilers were installed.

And this year, School No. 5—a *third* installation—is being heated with two Novelty Carburetor Boilers.

The carburetor chambers on the rear of the boiler automatically mix all smoke and carbon, ordinarily wasted, with oxygen from the air and burn them.

If you are planning School Buildings, Apartments, Churches or other large buildings, write for information about space-saving in the boiler room.

Street, Baltimore, Md., limestone, \$931,000; terra cotta, \$889,000; cast stone, \$899,000.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 29, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., June 30, 1924, for the construction, including mechanical equipment and approaches, of a one-story and mezzanine brick and tile non-fireproof Post Office building (approximately 72 by 66 feet), at Cohoes, N. Y. Drawings and specifications may be obtained from the Custodian of the site at Cohoes, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## SPECIFICATIONS FOR ROOFING MATERIALS

Requirements for roofing materials for use on relatively flat roof surfaces are specified in a series of circulars issued by the Bureau of Standards, Department of Commerce. These specifications were prepared by the technical committee on bituminous roofing and waterproofing materials of the Federal Specifications Board and are intended to serve as master specifications for the purchase of such materials by the government. They cover materials for three, four, and five-ply asphalt and coal tar pitch built-up roofing surfaced with gravel, slag, crushed stone, promenade tile, and slate slabs; and give the physical characteristics of the product required as well as methods of sampling and testing deliveries.

The specifications were prepared after considering suggestions received from producers and manufacturers of roofing materials, roofing contractors, architects, engineers, and large users of built-up roofing. They are considered fair to both manufacturer and consumer, and are expected to result in securing products suitable for the particular conditions of use outlined. At the same time they allow a wide latitude in selection of raw materials and methods of production. They are based on tentative specifications originally prepared by the Bureau of Standards in January, 1921.

The following U. S. Government Master Specifications may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 5 cents each:

### Circulars

- 156 Coal tar saturated rag felt for roofing and waterproofing.
- 157 Coal tar pitch for roofing.
- 158 Surfacing materials for bituminous built-up roofing.
- 159 Asphalt for mineral surfaced roofing.
- 161 Asphalt saturated rag felt for roofing and waterproofing.
- 162 Asphalt primer for roofing and waterproofing.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## As The Editor Sees It

Determined to take action which will reduce the shortage of skilled labor in the Construction industry, general contractors throughout the entire country are appealing to boys and youths who are graduating from schools and colleges within a few days, laying before them the benefits to be gained from entry into the building trades.

The campaign against the lure of the "white collar" job, initiated several weeks ago by the Associated General Contractors of America, is being aided by the co-operation of the Federal Board for Vocational Education. The government agency has issued a bulletin to its agents and educators generally in every state, outlining the efforts being exerted by the contractors and indicating the means which may be taken by those within its sphere of operation to add to the success of the movement.

The text of the bulletin issued by the Federal Board follows:

"Building trades employers in each community are planning to visit the public schools this year and explain to the graduating classes the advantages of apprenticeship in the building trades, according to the program announced in the current issue of the *Constructor*, national organ of the Associated General Contractors. An appeal to members of the Associated General Contractors to volunteer for this service was featured in the issue. Supplement-

ing this appeal, the *Constructor* published an article by G. A. McGarvey, of the Industrial Education Division of the Federal Board for Vocational Education, giving practical suggestions to contractors how to successfully address an adolescent audience. The plan has attracted wide attention on the part of employing builders who are confronted with the perennial problem of recruiting satisfactory apprentices.

"Such a step on the part of the contractors is a development of the first significance to vocational education. It is another indication of the increasing willingness of employers to co-operate with the public schools. It will strengthen the feeling of mutual serviceability between the schools and the economic interests of the community.

"The value of vocational talks to school pupils by practical business men must be far-reaching. A dynamic presentation to school boys of the advantages of building trades employment will do much to counteract the present mistaken tendency of youths to crowd into the "white-collar" occupations. The message of the employer will reach the boy at the turning point in his life. It will come to him at his most impressionable and plastic age. It will be a service of vocational guidance which is acutely needed by many of the pupils of our public schools.

"With the contractors taking the initiative in such a program, it behooves our

school heads to meet them half-way, and more. The vocational teachers and supervisors should act as liaison officers to this end. Contact should be established in each locality between the public school principals and the officers of the local building trades employers' association in order that adequate preliminary arrangements for the visits be made. The occasion of the visits should be staged with careful forethought. A cordial spirit of welcome should greet the contractors when they come.

"The plan is, of course, experimental on the part of the Associated General Contractors this year. But, by a proper spirit of co-operation, the schools have an opportunity to persuade the contractors to make the program permanent. Moreover, through the contacts thus established, the schools will often be able to win the interest and support of the contractors in the part-time vocational program for apprenticeship training. All in all, it is an exceptional opportunity for the schools to cement ties of co-operation between themselves and industry. The program should have the support of every progressive educator."

Circulation of this bulletin throughout the educational system of the country assures contractors that their efforts to induce boys and youths leaving school this year to enter the building trades will have an invaluable assistance.

By taking this move this year, general

contractors throughout the country will be laying the foundation for a systematized and highly productive method of securing apprentices each year in the future. If the movement can be so well established this year as to implant itself as a practicable annual action, educators will be able and glad to work hand in hand through weeks leading up to graduation week each year.

### WHY DEPARTMENT STORES BURN

*Electricity*, misused, was responsible for a fire waste of \$1,024,050, notwithstanding the abrupt decline in the loss from this factor in 1921 over the two previous years. It is possible, even probable, that two or three large fires in 1919 and 1920 swelled the total, and that the aggregate, therefore, does not represent a steady succession of small losses, which would be the more alarming situation. The hazards of faulty wiring and of heedless use of electrical appliances must be evident to department store proprietors. Probably, too, misuse of ordinary light dropcords figured to no small extent in the electrical hazard. Worn and broken insulation of cords, combined with bad splicing, are dangers so real as to make advisable the limiting of their use to strict necessity. Overloading of circuits too, is something to be avoided, particularly in the electrical department where scores of lamps are simultaneously lighted. Other electrical hazards are the employment of makeshift fuses after proper ones have burned out, unguarded paper and cloth light shades, and temporary wiring used for running electrical toys, for illuminating Christmas trees and for special displays. These changes and alterations in all cases should be made by a competent electrician.

#### *Defective Flue Causes Million Dollar Fire*

Another prominent agent in the destruction by fire of departmental stores is *Defective Chimneys and Flues*. Last March a six-story department store in Providence, Rhode Island, was gutted, with a loss exceeding one million dollars, by a fire directly traceable to a defective flue. The blaze, in a vent flue on the top floor, was discovered early in the evening by a watchman who rang in an immediate alarm. Along with two other small fires, one on the second and one on the third floor, this blaze was extinguished by the fire department; but an hour later firemen still in the building saw flames starting up on the sixth floor again, this time at a point near the continuation of the flue, seventy feet away from the original fire. Second, third and fourth alarms were sounded in rapid succession but before the fire finally was put out half of the roof and large areas

on the sixth and fifth floors had been destroyed, while the water damage extended throughout the building. This incident shows plainly the danger of defective vents and flues.

As part of the heating plant, chimneys and flues require the same close inspection and careful maintenance as are given the furnace itself. The right and wrong ways to erect chimneys are clearly defined. If a chimney is built solidly from ground to cap, is lined with fire-clay and is thoroughly cleaned at regular intervals, no trouble need be looked for. If flues are properly installed so that all adjacent woodwork is protected against the heat, and if pipes are kept free from soot accumulations, they will be safe.

Nowadays a number of the more important department stores have fur storage rooms containing high values concentrated in a relatively small space. Such rooms should be of fireproof construction, with approved insulating material in the walls. A writer in the *National Fire Protection Association Quarterly* suggests the following arrangements for such departments:

Racks and pegs for hanging furs should be of metal. The lighting of this room should be by stationary electric incandescent lamps, having all circuits controlled by switches outside the room. A small fireproof room adjoining should contain brine coils from refrigerating system and air may be circulated throughout the room by a slow-moving fan controlled from outside. Special devices, such as sprinklers and thermostats, should be installed here, as well as thermostatic control of the fan, so that any fire which raises the temperature abnormally would shut down the fan automatically. Temperatures should be recorded on a thermometer in the engine room with automatic notification if the temperature increases unduly.

In the majority of stores a special room, located commonly in the basement, is set aside for the preparation of window displays.

#### *Not Always Accidental*

Unfortunately, the loss officially attributed to *Incendiarism* probably does not tell the whole story. Underwriters well remember that the slump in business which began late in 1919, and continued for at least eighteen months, was marked by more than a few fires of "mysterious" origin. To arson probably can be ascribed one of the most disastrous department store fires of recent years, occurring in Hartford, Connecticut. Due to the presence of large open areas and of unprotected stairways and elevator shafts, the flames spread rapidly and involved adjoining buildings. The store itself was of rambling construction, consisting of several independ-

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS: COST LIMIT: LAST DAYS FOR FILING BIDS;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Garage**, 1848½ Russell street, Philadelphia, \$3,000. Architect, private plans. Owner, George D. Mills, Jr., Norristown, Pa. Brick, 1 story, 16x181 feet, slag roof, cement floors. Owner will build.

**Residence and Garage**, Stenton avenue, Germantown, Philadelphia, \$25,000. Architect, William L. Charr, 149 South Fourth street, Philadelphia. Owner, care of architect. Stone, 2½ stories, 50x42 feet, slate roof, hardwood floors, metal weather strip, waterproofing, oil heating equipment, electric light, tile work, metal lath, bond, ornamental iron work. Plans in progress.

**Supplies**, Philadelphia. Purchasing agent, E. J. Lafferty, 312 City Hall, Philadelphia. Crushed pebbles, valves, lubricating oils, grease, etc., hardware, bolts, nuts, rivets, washers, etc., iron casting, carbon paper, type-writer ribbons.

**Sewers, etc.**, Philadelphia. Owners, Department of Public Works, Bureau of Survey, 216 City Hall. Main sewers, sewerage treatment project. Proposal for electric testing instrument. Proposal for sedimentation units. Owners taking bids June 19th, 11 A. M. Inquire Room 416.

**Garage**, 5215 Germantown avenue, Philadelphia. Architect, private plans. Owner, William Bechtel, on premises. Brick and steel, 1 story, 35x216 feet, slag roof, cement floors, rolling steel sash, ornamental iron work. Owner taking bids due June 12th.

**Normal School Building**, Forty-eighth and Spruce streets, Philadelphia. Owners, Board of Education, Nineteenth above Chestnut street, Philadelphia. Site selected, but not yet purchased. Work contemplated.

**Community Center**, Oregon avenue, East of Randolph street, Philadelphia. Architect, George E. Savage, Witherspoon Building, Philadelphia. Owners, Mizpah Community Center, on premises. Brick, stone, 2 stories and basement, 86x45 feet, slag roof, mineral and pine floors, painting and glazing, plumbing, ornamental iron work, bond, tile work, metal lath, electric light, steam heat. Architect taking new bids due June 16th.

**Group of Building**, Fox street and School House Lane, Germantown. Architects, Zant-zinger, Borie & Medary, Otis Building, Philadelphia. Owners, William Penn Charter School, Twelfth above Chestnut street, Philadelphia. Preliminary plans in progress. Too early for details.

**Stores and Garage**, Locust avenue, 220 feet East of Boyer street, Philadelphia. Architect, H. H. Klein, Bulletin Building, Philadelphia. Owners, Louis & Samuel Levin, care of architect. Reinforced concrete and brick. 1 story, 100x200 feet, slag roof, cement floors, plate glass, hollow metal skylights, fire doors, steam heat, electric light. Plans completed. Architect ready for general bids.

**Church**, Cobb's Creek Boulevard and Cedar avenue, Philadelphia. Architects, Hoffman & Henon, Finance Building, Philadelphia. Owners, St. Carthage's Roman Catholic Church, Rev. P. F. O'Neill, on premises.

Stone, cut stone, brick, steel (plumbing, heating, electric reserved), tile roof, cement and maple floors, painting and glazing. Revised plans ready for bids in two weeks.

**Church**, 5443 Greene street, Philadelphia. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Second Church of Christ Scientist, on premises. Architects ready for bids.

**Two-Family Residences (10)**, York Road and Queen Lane, Philadelphia. Architect, private plans. Owners, T. P. Twibill Const. Co., 1202 Liberty Building, Philadelphia. Brick, stone, 2 stories, 6 rooms, pine floors, electric light. Plans in progress. Owners will be ready for bids July 1st.

**Store and Residences (2)**, Southeast Corner Twelfth and Chambers streets, Philadelphia. Architect, private plans. Owners, T. P. Twibill Const. Co., 1202 Liberty street, Philadelphia. Brick, 2 stories, 7 rooms, garages. Plans in progress.

**Manufacturing Building**, Marshall street, between Oakdale and Harold streets, Philadelphia. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Hardwick Magee, 1220 Market street, Philadelphia. Brick, cut stone, reinforced concrete, 4 stories and basement, 266x94 feet, slag roof, cement floors, safety treads, roof ventilators, waterproofing, ornamental terra cotta, ornamental iron work, floor hardener, tin clad, kalamein, hollow metal doors, sheet metal skylights, rolling steel sash, metal lath. Architects taking bids due June 17th.

**Church (alts. and add.)**, Seventeenth and Summer streets, Philadelphia. Architects, Hodgins & Hill, 130 South Fifteenth street, Philadelphia. Owners, Order of the Eastern Star Temple, Fred Boyer, 1610 Diamond street, Philadelphia. Metal lath, bond, oak floors, carpentry and mill work, roof ventilators, cement work, brick work, cut stone, steel, steel sash, composition floors, iron work, plastering, tile and marble and mosaic work, painting and glazing, plumbing (steam heating alterations), electric work, metal lath. Architects taking bids due June 16th, 4 P. M. sharp.

**Church and Sunday School**, Southwest Corner Twelfth and City Line, Philadelphia. Ar-

chitect, Wesley Leshner Blithe, 608 Chestnut street, Philadelphia. Owners, Oak Lane Methodist Episcopal Church, on premises. Stone, cut stone, steel, 1 story and gallery, 188x65 feet, wing 40x98 feet, slate and slag roof, composition, cement and maple floors, painting and glazing, dampproofing, ornamental iron work, bond, tile work, metal lath (plumbing, heating and electric reserved), concrete cast stone. Architect taking bids due June 12th.

**Store and Apartment Building**, Northeast Corner Thirty-seventh and Walnut streets, Philadelphia. Architect, Charles H. Schaef, 11 South Sixteenth street, Philadelphia. Owner, Mr. Joseph Rabinowitz, 305 Shubert Building, Philadelphia. Brick, 4 stories, 36x120 feet, tile and slag roof, composition floors, electric elevators, roof ventilators, metal ceilings, vault lights, incinerators, kalamein and hollow metal doors, steel sash, tile and marble work, metal lath, vapor heat, electric light. Architect taking bids due June 14th.

**Residence and Garage**, Montgomery avenue, Chestnut Hill. Architects, Willing, Sims & Talbutt, 126 South Eighteenth street, Philadelphia. Owner, Jay Cooke, Esq., care of architect. Brick, cut stone, stone, 2½ stories, 64x65 feet, wing 81x23 feet, slate roof, oak and pine floors, tile and marble work, bond, ornamental iron work, waterproofing. Architects taking bids due June 14th.

**Residence (alts. and add. to Apartments)**, Huey and Harper avenue, Philadelphia. Architect, Charles M. Talley, Telford, Pa. Owner, David Colvey, on premises. Stucco, shingle and all slate roof, composition, oak and pine floors, painting and glazing, carpentry and mill work, stone work, plastering, plumbing, ornamental iron work, tile work, hot water heat, electric light. Alternate oil burning. Architect taking bids due as soon as possible.

Contract CK-22, Willow Grove-Wyoming. \$169,503. Contract awarded to Hannaman-Burroughs Co., Salisbury, Md.

Contract CN-20, Basin Corner Newport and Lincoln Highway. Contract awarded to D. E. O'Connell & Sons, Ridley Park, Pa. \$159,592.50.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 29, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., June 30, 1924, for the construction, including mechanical equipment and approaches, of a one-story and mezzanine brick and tile non-fireproof Post Office building (approximately 72 by 66 feet), at Cohoes, N. Y. Drawings and specifications may be obtained from the Custodian of the site at Cohoes, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 372)

ent tructures opening into each other, all unsprinklered. The loss reached \$750,000, and it is the opinion of inspecting engineers that a sweeping conflagration was averted only by the hard work of the fire department. This fire, too, furnishes another demonstration—they are presented daily—of the injustice of permitting unprotected structures to continue to menace individually safeguarded property

such as were some of the exposed buildings in this case.

Many large department stores have halls or small theatres in which are held recitals, fashion shows and other affairs. Obviously, in such cases, every hazard peculiar to the independent theatre exists in this section of the store, and ever safeguard, including automatic sprinklers, fire curtain and exit facilities, identified with public theatres, belongs also in these private halls.

Probably the best interior fire alarm for large department stores is a system of call bells rung in code. Boxes connecting with the central alarm system of the city also should be introduced.

Every department store, however humble, should install "first aid" fire-fighting equipment for combating incipient blazes. Of these appliances the most serviceable, perhaps, are fire extinguishers and fire buckets kept filled with water and, like the extinguishers, conveniently placed. Large stores, of course, will have stand pipes and reels of hose located at strategic points.

It frequently happens that thoughtlessness or carelessness in the excessive use of water results in spoilage far greater than the damage inflicted by the fire itself. Foresighted merchants, however, can render unlikely the commonest sort of water damage, should fire occur, by the simple expedient of leaving two or three inches of air space between fixtures—cabinets, shelves and counters—and side walls and interior partitions. Water thrown on higher floors of a building of joisted construction has a tendency to seek as its channel of descent the cracks which may have developed between floors and walls. If nothing is in contact with the wall, the water will flow to the basement in an uninterrupted sheet.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

"Facts are stubborn things." Advertise only the truth about your product and watch the result.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Residence of U. S. EPPERSON  
Country Club District, Kansas City, Mo.

Heated by a No. S 8-40 Novelty Carburetor Boiler. Architect: Horace La Pierre, Kansas City. Heating Contractor: E. K. Campbell Heating Co., Kansas City. Vapor System—Direct Radiation, 3715 Sq. Ft.

## Another Tribute—

In its magnificence and scope the Country Club District of Kansas City, Mo., recognizes no peer. The outstanding residence of this famous section is the home of U. S. Epperson, Esq. (Cost over \$1,500,000.)

The fact that a Novelty Carburetor Boiler was selected for this architectural achievement is another tribute to the prestige and efficiency of this newest patent heating boiler, which has been installed in a notable array of fine buildings all over the nation.

Cheap oil is used as fuel. From the first—three years ago—the Epperson home has been cosy and warm as well as architecturally impressive.

Burns any kind of fuel without smoke and with exceptional freedom from heat losses. The carburetor chambers on the rear of the boiler automatically mix all smoke and carbon, ordinarily wasted, with oxygen from the air—and burn them. The air enters top and bottom slot of the carburetors, as shown in the picture. *No adjustment of air intake is necessary.* Rate of combustion determines amount of air required.

*Write for illustrated and descriptive booklet. There are facts in it you would like to have at your finger tips.*

Brick, steel, hollow tile, 2 stories, 31x186 feet, slate roof, fireproof doors, hollow tile, waterproofing and dampproofing, metal lath, tile and marble work rolled steel sash, fire doors, bond, iron stairs (heating, plumbing and electric work reserved). Architects taking bids due June 25th.

**Studio (alts. and add.)**, 216 East Hanover street, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, J. H. Fritz, 148 East State street, Trenton, N. J. Brick, steel, 3 stories, 2x70 feet, slag roof, hardwood floors, vapor heat, electric light, metal lath, tile and marble work, rolled steel sash and skylights, ornamental iron work.

Architect taking revised bids due June 19th.

**Residence**, Scudders Falls, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, Lewis H. Lawton, Broad Street Bank Building, Trenton. Hollow tile and stucco, 2½ stories, 42x90 feet, Spanish tile roof, hardwood floors, hollow tile, vapor heat, electric light, metal lath, tile, marble and terrazzo work, ornamental sash. Architect taking bids due June 21st.

## New Jersey Contracts Awarded

**School (add.)**, Somers Point, N. J. Architect, Charles H. Adams, Chelsea Bank Building, Atlantic City, N. J. Owners, Somers Point School Board, R. Braddock, Somers Point, N. J. Brick, frame, steel, 2 stories and basement, 25x34 feet, slag roof, cement and pine floors, dampproofing (heating, electric work, plumbing reserved). Contracts awarded: Charles S. Corson, Linwood, N. J., \$27,606. Heating and ventilating, R. Johnson, Ocean City, N. J., \$6,791. Plumbing, Walter A. Smith, Somers Point, N. J., \$709. Electric, Edward A. Pratt, Somers Point, N. J., \$512.

**Stores and Apartments (3) and Lodge**, Phillipsburg, N. J. Architect, E. H. Wenzelberger, 3 Center Square, Easton, Pa. Owners, P. O. S. of A., George Smith, Phillipsburg, N. J. Brick, 3 stories, 50x67 feet, slate roof, hardwood floors, steam heat, electric light, tile work. Contract awarded to Butz & Clader, Ainey Building, Allentown, Pa.

**Sub-Station Buildings**, Automatic Train Control, Hammonton and Atlantic City, N. J. Architect, Samuel T. Wagner, Reading Terminal Building, Philadelphia. Owners, Atlantic City Railroad, care of Reading Company, Twelfth and Market streets, Philadelphia. Brick, steel, 1 story, 15x12 feet, 17x14 feet, asbestos shingle roof, cement floors, rolling steel sash, steel doors. Contract awarded Curtis Grindrod, 10 South Eighteenth street, Philadelphia.

**Sunday School**, Maple and Center street, Merchantville, N. J. Architect, George E. Savage, Witherspoon Building, Philadelphia. Owners, First Presbyterian Church, Rev. Gordon M. Russell, Merchantville, N. J. Stone, 1 story and basement and gallery, 68x42 feet, wing 52x40 feet, mineral and pine floors, composition roof, plumbing painting and glazing, bond, ornamental iron work, metal lath, tile work, steam heat, electric. Contract awarded George Bachman, Camden, N. J.

**School**, South Broad street, Trenton, N. J. Architect, private plans. Owners, St. John's Church, Rev. P. J. Hart, 153 North Warren street, Trenton, N. J. Brick, steel, 3 stories, 60x115 feet, slate roof, hardwood floors, hollow tile, safety treads, roof ventilators, steam heat, electric light, metal lath, iron stairs. Contract awarded to F. D. Priory, 11 West State street, Trenton.

**School (alts.)**, Smithville, N. J. Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Eastampton Township School Board, J. H. Hinchman, secretary, Smithville, N. J. General alterations, partitions work. Contract awarded to E. W. Esham, Mt. Holly, N. J.

**Pottery**, Trenton, N. J. Architect, W. A. Klemann, First National Bank Building, Trenton. Owners, Trenton Potteries, Clinton and Ott streets, Trenton, N. J. Steel, brick, 1 story, 48x48 feet, cement tile floors, electric work. Contract awarded to William Burton, American Mechanics' Building, Trenton.

## Miscellaneous Construction News

**Sunday School**, Salisbury, Md. Architects, Norman Hulme and J. J. Dull, 1524 Chestnut street, Philadelphia. Owners, Asbury Methodist Episcopal Church, Rev. Hamilton P. Fox, 602 Division street, Salisbury, Md. Stone, steel, 2 stories, 55x110 feet. Plans in progress.

## Miscellaneous Contracts Awarded

**Warehouse (alts. and add.)**, 117 Market street, Wilmington, Del. Architects, Brown & Whiteside, Dupont Building, Wilmington, Del. Owners, Hudson Supply Co., Front and Market streets, Wilmington. Brick and concrete, elevators, steam heat, electric light, tile work, fire doors, rolling steel doors. Contract awarded to Smyth Const. Co., 826 Orange street, Wilmington, Del.

**Store Front**, 710 Market street, Wilmington, Del. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owners, Roebbling Piano Co., care of architect. Brick, steel, limestone, copper work, plate glass, tile and terrazzo work, electric lighting, plumbing. Contract awarded to Smyth Const. Co., 826 Orange street, Wilmington, Del.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., June 9, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., July 7, 1924, for the construction of Mezzanine for Room 402, including all incidental changes and repairs in the U. S. Post Office and Court House, Pittsburgh, Pa. Drawings and specifications may be obtained from the Custodian at Pittsburgh, Pa., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., June 12, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., July 10, 1924, for the construction of a one-story stucco face, none-fireproof extension about 82x45 feet in size at the U. S. Post Office and Court House, Charleston, W. Va. Drawings and specifications may be obtained from the Custodian of the building or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## BUILDING MATERIAL PRICES

The cost of building and the part that the price of building material plays in building costs is naturally a subject of keen interest these days. Moreover, the fact that one of the uppermost questions is that of whether or not building material prices may be lower in the future, it is in order for us to go into this building material price subject analytically that we may form some more definite ideas as to what the future may bring.

A charting of price levels and different commodities today as compared to pre-war days shows an average running from 31 per cent. for chemicals and drugs up to 96 per cent. for clothing above 1913. The general average of all groups is given as 52 per cent. above 1913, while building materials are listed as averaging 82 per cent. above, being the highest in the charting with the exception of clothing, and considerably above the general average of all groups.

The question is, will building material prices likely be lower in the future? And if so, how much lower than they are at present and how much above the old pre-war levels?

Building materials are made up of many items, but the leading items in major construction work are lumber, brick and hollow building tile, cement and the materials of concrete, steel and other metals used for structural purposes. Stone enters some, but not as a big factor in everyday building. The major factors in everyday building are lumber, clay products, cement products and metal products.

A study of these by items shows that lumber, while considerably above the pre-war level, is also considerably below the 1920 peak, and is more likely to go higher in the future than to come lower. There is an understandable reason for this. Our timber supply is limited, and we are cutting into our forest reserves at a rate that creates apprehension for the future and adds to the value of the remaining stumpage. So, broadly speaking, and looking at it in the light of future years, there is no prospect for cheaper lumber, but rather the indications are that the lumber item in building material, including flooring and general millwork, is as low as it need be expected, and in the future will likely cost more. That point will be pretty generally granted without argument, and incidentally it points toward a smaller use of lumber in wall construction in the future and a wider use of brick, clay products, cement products, and metal products.

The question, then, seems to hinge mainly on the prospect for lower prices in clay products, cement products and metal products.

Two important factors in the cost of clay products and cement products are

labor and fuel. Machinery enters too, but machinery itself is largely the product of labor and fuel, so we may still regard labor and fuel as the dominant factors in determining cost for both cement products and clay products. There has been some easing in fuel prices as compared to a year ago, on the whole perhaps \$1 a ton for coal. This brings some easement in the cost of producing both brick and cement, but it is just about compensated for by increased wage costs, so the general costs are practically the same.

If we analyze carefully the industry of brickmaking as an example to get a light on costs and furnish the probable trend of cost in the future we find that labor and fuel are the important items, but there are some others. There is capital invested, and there is that thing we call overhead, which includes wear and tear and depreciation, involves insurance, clerical work, salesmanship, advertising and a lot of items which, taken all together, make up an interesting feature of cost. There is an item of raw material, too, but this is plentiful enough that its value today and its prospective value in the future is not enough to play any important part in cost. Here the clayworking industry differs widely from the timber industry. There is no scare or apprehension about exhausting raw material supplies in the future.

Analyzing the cost items in brickmaking, we may take for granted that the cost coming from capital invested, from business management, and general overhead will not decline. In some instances there may be opportunities to trim a little but on the whole they may be regarded as fixed items. That leaves us, then, so far as manufacturing is concerned, the matter of fuel and wages as the factors which may fluctuate and in so doing will govern the range of costs and prices either upward or downward. As stated above, fuel has already eased a little bit but it is not likely to ease more because it is down to practically an unprofitable basis for mines under existing wages. So the only chance for cost reduction here is through more efficient burning, through better methods and devices that will burn 1,000 bricks with less coal. We are making some progress along this line, but in the main the profit from this progress must, for the moment, go to pay the cost of new installation. So we may regard fuel as having eased a little, about \$1 on the ton for coal, and as being permanent for the year on that basis.

In the matter of wages, there has been some stiffening during the year, which has just about made up for the easing in coal. And it may be that the tension will ease some and wages be lowered a little during the year. There is no thought, however, that wages will again go down to the pre-war levels. More-

over, no one desires anything of the kind. There is some inflation in wages in the building industry which should be reduced, but on the whole, good wages are good for the prosperity of the country as well as for the wage workers, and we may take it for granted that wages will continue higher on the whole, as compared to pre-war days, than general commodity prices. They may settle down a little, but they are on a new basis and there will not be enough reduction in wages in the clayworking industry to make any great reduction in the cost of brick making. Whatever reduction from the productive labor end is obtained will have to come through a wider use of labor-saving machinery, thus increasing the productivity per man. There is some chance for improvement here just as there is chance to improve some in fuel cost, by better devices and methods, and on the whole we will likely make some progress during the next few years. But it will not be such as to bring radical changes in the cost of producing brick.

On the whole, the cost of production for brick and hollow tile and similar clay products is now fairly well stabilized, and there is not much promise of materially lower prices except where local conditions have temporarily created shortages that have resulted in premium prices locally and temporarily for these products. High prices for these products will come down to the normal level, but taking the industry as a whole, whether it be in brick, hollow building tile, sewer pipe or drain tile prices have been so close to costs of production that there is not much chance for lower prices if the business is to continue yielding a profit, except where cost can be lowered by trimming down on wages or fuel. The opportunities for this will not be such as to make any great difference in price for the next year or two if all signs read right.

It seems to be pretty much the same story with cement and with metals. They have settled down on a stable basis with the present cost of fuel and wages, and it looks like stability of prices all around with the odds in favor of lumber going higher, thus making room for a wider use of clay products and other hard building material in modest home construction as well as the larger building undertakings of the country."—*The Clay Worker*.

**It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.**

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation**.

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## As The Editor Sees It

HIGH interest for the entire construction industry is held in the fact that a government agency has refused to accept the theory that economy is promoted through the "separate contract system" under which individual agreements would be made between owners and those handling distinct installations such as plumbing, heating equipment, electrical fixtures and wiring.

The Interdepartmental Board of Contracts and Adjustments, an agency created by General Dawes while he was head of the Bureau of the Budget, has adopted a resolution which has the effect of refusing to abolish the general contract system from federal construction operations. This resolution was adopted by the board in answer to the request for adoption of the separate contracts procedure made by a joint committee of the National Association of Master Plumbers, the Heating and Piping Contractors' National Association and the Association of Electrogists-International.

The claims made by this committee in favor of the separate contracts system were replied to in a brief filed with the board by the Associated General Contractors of America, it being through this brief that a firm case for the joint contract system was established.

The board's decision acquires an added importance, it is pointed out, because of the effect which it will carry into the field of construction work other than that carried on by the government.

The text of the resolution, pointed to as emphasizing the necessity for general contractors' services in building operations, follows:

"WHEREAS, a joint committee of the National Association of Master Plumbers and the Heating and Piping Contractors' National Association and the Association of Electrogists-International, has requested the Interdepartmental Board of Contracts and Adjustments to take such action as will require the various departments and independent establishments of the Government, in connection with the performance of public works, to advertise separately, and contract separately, for the portions of the work which pertain to their respective specialties; and

"WHEREAS, this board has taken this question under careful advisement and has heard the arguments of the above-mentioned associations; of the representatives of the various departments and independent establishments of the government; and of numerous general contractors; and

"WHEREAS, in view of the evidence produced, taken together with the experience of competent government officials familiar with construction work, the board believes that the granting of this request of the associations above-mentioned would—

"(a) Unduly restrict the freedom of action of the heads of departments;

"(b) Be of doubtful value from the standpoint of actual economy in many,

if not in the majority, cases;

"(c) Result in placing responsibilities and duties upon supervising government officials which they are not always in a position to satisfactorily perform;

"(d) Take away from the Government any advantage which it might otherwise secure from the utilization of a general contractors' organization and powers of properly timing and co-ordinating the various parts of the work; and

"(e) Tend to delay the performance, give rise to claims for delays of one contractor by another, and create difficulties which are largely avoided when the work is performed under one contract. Therefore be it

*Resolved*, That it is the opinion of the board that it is to the interest of the United States that no action be taken which would place any restriction upon the authority of the heads of departments or independent establishments to exercise discretion as to the manner of awarding contracts or sub-dividing the work to be done; be it further

*Resolved*, That the question of the advisability of sub-dividing contracts in specific cases be called to the attention of contracting offices in the manual of instructions now being prepared by the Board."

F. L. Cranford, Brooklyn, N. Y., President of the Associated General Contractors of America, commenting upon adoption of the resolution, said:

It is almost axiomatic that states, cities

PRINTS**

and counties should turn to the Federal Government in determining their practices with respect to contract forms and practices in construction. Certainly if the Federal Government could establish fundamental laws and under these laws acceptable standard contracts and practices, in due course of time the way could be appointed for other governmental agencies to do likewise.

If we assume that there had been no national organization of general contractors to present the matter of separate contracts for mechanical equipment of buildings is it not conceivable that the Joint Committee of Master Plumbers, heating and piping contractors and electrical contractors would have fastened on the Federal Government a practice which some of the states unfortunately, have written into their laws? Should this practice become general in all of our governmental agencies, is it not logical to assume that other sub-trades would follow in its wake and gradually the business of general contracting be legislated out of existence? Is it not plain that the general contractors who work far from the metropolitan centers and in small towns, or even in the country, are virtually affected by such procedure as this?—*Associated General Contractors of America.*

#### TO CO-ORDINATE BUILDING MAINTENANCE WITH NEW CONSTRUCTION WORK

*Philadelphia Building Owners and Managers' Association So Decides*

The Philadelphia Building Congress was the first organization of its kind to officially appoint a Committee on the Co-ordination of Maintenance and Repairs with new Construction Work.

D. Knickerbacker Boyd, Architect, Chairman of this Committee was recently in Portland, Oregon, while on a trip to the Pacific Coast as Executive Vice President of the American Construction Council to organize local Congresses in co-operation with the industrial Relations Committee of the American Institute of Architects.

He addressed the members of the Oregon Association of Building and Construction and explained the activities of the Philadelphia Committee. These are "to secure the co-operation of the owners, managers and occupants in making a survey of the maintenance and repair requirements of buildings and structures in Philadelphia and vicinity, including Federal, State and Municipal Works, to compile and classify such data and to make studies to determine the periods when labor on new construction work is least employed so that in every way possible maintenance work and alterations in existing structures may be done at such times as conflict least

with new construction requirements and make for greater continuity of employment."

So impressed were leading members, who were present, of the Portland Association of Building Owners and Managers with the economic and social advantages of such a procedure that the Association officially decided to defer all usual spring and summer maintenance and repairs possible, especially indoor work, because a brief survey disclosed that much of such work frequently crowded into the summer months could be done just as easily and efficiently during slack winter periods.

The Boston Building Congress and then the New York Congress, which last month increased its membership over one thousand in a week, have been making similar recommendations. Now, however, comes official action by the Building Owners' and Managers' Association of Philadelphia, which after conferring with the Philadelphia Building Congress has taken this formal action:

"Resolved that the Board of Directors of the Building Owners' and Managers' Association of Philadelphia recommend to all members and to all owners and managers of large buildings in the city of Philadelphia that they defer such of their maintenance and repair work as can be conveniently postponed until such periods during the coming winter as there might be a lull, or easing-off of conditions, in the building and construction industry.

This action is being taken to help reduce the unemployment problem when winter comes again. 'Seasonal employment' is recognized as one of the evils in the labor situation. Large numbers of men, by the nature of their profession or trade, are employed only a part of the year.

A brief survey has disclosed that much repair work, now crowded in the summer months, could be done just as easily and perhaps more efficiently during the slack winter periods."

Mr. George E. Melloy, 929 Chestnut Street, is President of the Building Owners' and Managers' Association of Philadelphia. Frank C. Stiefel, Curtis Publishing Company, Secretary, and Thomas F. Egan, Jr., 929 Chestnut Street, Executive Secretary.

The Philadelphia Building Congress is now recommending to the National Association of Building Owners and Managers that it takes up at its forthcoming Annual Convention in Colorado Springs, beginning on June 23rd, the important subject of having its local Associations throughout the country co-operate with local Building Congresses as has

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

been done in Portland, Oregon, and Philadelphia in making surveys of construction activities and material supplies so that maintenance work, repairs and additions to existing structures may be co-ordinated with new building work to the best advantage in each locality.

## THE KIND OF TOWN WE WOULD LIKE TO LIVE IN

BY JOHN IHLDER

*Manager, Civic Development Department, Chamber of Commerce of the United States*

The excellence of a town depends so much upon the ability and the spirit of its people that these may quite upset any comparative rating based upon actual, tangible accomplishment, though, of course, with ability and the right spirit the people of any given community are bound to secure a lot of accomplishments.

The trouble is that we have to mark them on what they have done to date and can not take into account, what may be the fact, that they have been overcoming some great natural handicap which absorbed most of their energy without showing much positive result, or, what again may be a fact, that they have only recently learned how to work together effectively. In either case the marks given their town are likely to be low, and yet, because of the spirit they have developed, the things they are now doing, the accomplishments they are sure to have to their credit in the near future, they may have a town that we would find it very inspiring to live in. For it is where men are now achieving, not where they have achieved and are now sitting back admiring the past, that we would want to live.

On the other hand, there is no limit to achievement except the limit imposed by our personal limitations. So where we find a community that has done a lot and is still going ahead with the same vision and enthusiasm and energy to fresh achievement, there we probably shall find the people with whom life would be best worth living.

I assume that the existence of a town or city depends upon business. The first test of community excellence therefore is, What kind of a place is it for business? And the answer to this question goes a long way toward answering that other important question. "Is it the kind of a town we—you and I—would like to live in?" For, I also assume that we must earn the living we are going to live.

Having assured ourselves of the ex-

cellence of our town from the essential point of its providing us with a living, the next question is, what does it provide *beyond* mere living. For essential as we feel that mere living is, that alone will not satisfy us; much less will it make others who are already making a living elsewhere look upon our town with desire.

Some day the hard-boiled man wakes up to find that his associates who have made their pile, have moved to some other place to spend it, and the fellow who is irked by the sight of toil, realizes that it is on the profits of business that he exists. As these two scold each other the audience begins to wake up to the fact that business is the basis of most of what makes life worth living, beauty, art, music; comfortable homes, a gracious social life; all these come from the profits of business. And at the same time it wakes up to the complementary fact that business is not an end in itself but is a means to an end, "that we may live more abundantly."

So we begin to understand that while business is the first essential to our town, it is not the whole town, and consequently instead of spoiling the rest of the town it must make the rest of the town a better place to live in. I am therefore going to suggest an enlargement of our first test:

"While the existence of a town or city upon business, that existence is not justified unless the profits of business make life in that town constantly more and more worth living."

Assuming that we are agreed upon this double-barreled proposition, we shall proceed by defining a series of excellence by which to measure our town.

First Item.—My first item in grading our town is to assume that it has a variety of industries none of which are mutually harmful. A blast furnace and a silk mill, for example, do not make ideal neighbors.

Second Item.—The industries of our town should be those for which the town offers peculiar advantages.

Third Item.—Commerce—This is put third instead of first because in spite of historical development, commerce has come to depend, especially in retail business, somewhat on industry.

Fourth Item.—Has our town a plan which will guide its future growth, and regulations which will prevent short-sighted and greedy individuals from handicapping business and spoiling those things upon which we spend the profits of business.

Fifth Item.—Does our town have good housing?

Sixth Item.—Education—Does our town provide enough schools for all its children and are all its schools good?

Other Items.—Recreation—Public—

outdoor, playgrounds, parks, etc.—indoor, music, etc.

Commercial—bowling alleys, pool rooms, movies, theaters, music, etc.

Public Health—Site of the city, natural drainage, water supply, sewage, waste disposal, health departments.

Security—Fire, Police—courts, jails.

Neatness and Repair—Public and semi-public buildings,—railway station, streets and public places, private buildings.

The condition of these indicates whether our town has or has not community spirit, alertness, self respect.

Taxes and bonded indebtedness if too high indicate slackness in administration or worse, indifferent citizenship, lack of results from expenditures. If too low indicate an indifferent citizenship and lack of civic pride. Municipal expenditures should be investments which in large measure produce financial results by facilitating business and raising values. Some, like expenditures on schools, are investments in the future.

Expenditures for present improvements, like street paving, should be entirely completed, bonds paid up, during the life of the improvement.

If city has a debt incurred to meet current expenses or to pay for improvements which are now used up it indicates a low standard of citizenship.

Beauty—Beauty like happiness is best when secured as a by-product. An ugly thing is not made beautiful by putting a useless ornament on it. Real satisfaction comes from having the things we use every day beautiful. And they will be beautiful if they fully meet the needs of use. The present day automobile is becoming a thing of beauty, but the main consideration is that it shall be useful. Our town will be beautiful when we give enough thought to our buildings and to our streets to make them fully efficient. The trouble now is that they are half baked, lick and a promise jobs.

Individuality—Our town should have individuality, not be a copy of some other place. If it has a good tradition in architecture, follow that tradition, don't build an imitation New York hotel in Charleston. Make use of natural beauties, river, valley, hills, etc. They are never quite the same as those in other towns. Use local names for your streets so that they will recall your history or make those who repeat them think of your town. When one says Fifth Avenue he probably thinks of New York, but there are a hundred other fifth avenues. When one says Peachtree Street he does not have to add Atlanta.

City Government—We won't try to set up a score for the government but will assume that under our democratic system, if the community stands well on the other items listed then it must have a fairly good government because it has a good citizenship.

Citizenship—Of course we have all begun to realize by this time that there is no way of getting a good government without having a good, active citizenship. Perpetual motion is as much a dream in civic affairs as it is in mechanics. But an active, effective citizenship means effort, constructive effort. So our town has its quota of civic and social agencies which afford opportunity for citizens to choose the subjects in which they are most interested, study them, experiment with them, and then, on the basis of knowledge, put them over. So we have a live chamber of commerce to present the business man's point of view on community problems and we have philanthropic agencies to deal with our social problems.

The Spirit of the People.—If there is any one thing that makes us want to live in a town it is the spirit of the people. I put this last because it is an intangible and we Americans want something we can get a grip on. But this intangible is so important that it can't be left out. Anyone of you who has lived among strangers for awhile knows the joy of again being among his own people. And our own people are those who are friendly, helpful, willing to get in and push. That spirit is not natural always, but it can be cultivated. And where that spirit is there is also a good town, the kind of town we would like to live in.

## ZINC ROOFS UNDER TEST

Tests of corrugated zinc roofing are now under way at the Bureau of Standards of the Department of Commerce for the purpose of determining the loads that can safely be carried by this material. Unlike most roofing materials zinc fails not by breaking but by bending slowly under load, the material taking a permanent set. It is therefore not considered desirable where heavy loads must be born continuously, unless it is well supported. But where the normal load is light, as it is apt to be in the tropics, zinc roofing may prove more durable than galvanized steel, as the latter fails rapidly from corrosion in such climates.

The test made on the roofing consists in loading the corrugated sheet with sand, the sheet being supported on a framework representing the roof purlins. The load is left in place for a month or more and the deflection is measured each day.

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## Has a handy place to keep *pots and pans*

Small kitchens call for compact, efficient cooking equipment. The Round Oak Gas Range Type D exactly fills the bill. It is only 38 inches long and has a handy compartment for pots and pans. Housewives everywhere are enthusiastic, too, about the better cooking results they get with this improved range. For further information phone or write—

## LINOTILE FLOORS

### Have Character

Unusually effective designs are obtained with Armstrong's Linotile Flooring. As its name indicates Linotile is tile made and laid in separate units, and not being supplied in sheets or in set patterns is capable of wide expression in design.

But aside from the effective designs, Linotile is

Resilient  
Non-slippery  
Silent underfoot  
Warm  
Sanitary

Easy to clean  
Odorless  
Artistic  
Durable  
Reasonable in cost

We shall be glad to give you full details of the wonderful possibilities of Linotile as a flooring for residences, banks, offices, public buildings, etc.

## As The Editor Sees It

### ELIMINATION OF IRRESPONSIBLE OFFICIAL CONTRACTORS

*Public Works Official, Surety Company  
Representatives and Associated General  
Contractors of America Discuss  
Subject with Secretary Hoover*

Steps of vital importance to the nation, looking to the elimination of the irresponsible contractor through the co-operative action of surety companies, public officials and contractors' organizations were taken recently when nationally prominent public works officials, officials of surety companies and representatives of the Associated General Contractors of America met with Secretary of Commerce Hoover at the Department of Commerce.

The Associated General Contractors were responsible for the conference that organization seeking to find some plan whereby the industry, with the co-operation of surety companies and public works officials, might devise some plan whereby the incompetent, irresponsible official contractor might be eliminated. Benefits from such an action, it was pointed out would be derived through the elimination of losses to the surety companies, through the elimination of hazards caused to the more responsible contractor and to the state governments.

Secretary Hoover, shortly after Gen. R. C. Marshall, of the Associated General Contractors called the meeting to order, told those present that since he had

become head of the Department of Commerce more than 500 similar conferences had been held in the Department. He spoke of the growing tendency on the part of industries to ask the Government for assistance in solving their difficulties. Co-operation by organizations and by allied industries, he said, holds the only hope of keeping the United States an individualistic nation with the proper development of private initiative. He discussed business booms and depressions, showing how depressions can be best prevented by overcoming the boom period with their accompanying wastefulness.

Methods of surety companies in their investigations before underwriting were described as lacking an adequate system in many cases, and several speakers urged the establishment of a credit rating system. It was revealed that there is a committee of surety companies which is working toward a closer understanding as to the process of classification and ratings under such classifications but that this work is not necessarily a credit rating system alone.

The action taken included a resolution favoring the elimination of the bid bond on contracts and the sureties consent. Discussion of this brought out a sentiment in favor of the use of securities like liberty bonds.

Another action taken was adoption of a resolution that all contractors should furnish full and accurate information at the time of making application for surety

bonds both as to their financial standing, experience and contingent liability from work on hand, and that none of this information should be more than six months old. Discussion of this showed an agreement that in the bonding of a contractor, experience should be the most important factor, and that the next should be his equipment, its amount and condition, while the third should be the financial condition.

An important contribution to the discussion was information given by state highway officials as to the contractors who bid for work in their various states.

A further action was to refer to a committee of three to be appointed by the chairman the improvement of methods of ascertaining credit information, the committee being charged with working out a better method than now obtains.

Another committee of three was ordered by the meeting to survey the present practice of surety companies in giving free service in engineering information and estimates. Discussion of this brought out a wide variance of opinion as to the value of present practices in this direction.

Further discussion was given to the practice of certain agents in splitting commissions with the contractor. This was denounced by representatives of the agent's organization as hampering the efficiency of a large body of men who are giving honest service to both their companies and their clients.

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**

1729-31 Sansom Street  
BELL PHONE, SPRUCE 1256

Philadelphia  
KEYSTONE PHONE, RACE 3515

**BLUE  
PRINTS**

The meeting referred to committees' problems of other forms of securities, uniform enforcement of the time penalty and the publication of the name of surety companies on each security bond.

It was decided that these committees would have had time to complete their studies to a point where a report might be made at a meeting to be held late in September.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

#### Opportunity for Cement Contractor or Plasterer—

To buy good-sized shop, storage yard, office and dwelling, all combined, in the heart of Kensington, in Philadelphia, at a sacrifice price. Owner will help finance closely.

ARENEL REALTY COMPANY

121 N. Broad Street

Philadelphia, Pa.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

*The Pallas Apartment, Atlanta, Ga., Equipped with one No. 6-40 and one No. 11-40 Novelty Carburetor Boiler. Architect: C. E. Frazier, Atlanta, Ga. Heating Contractor: Richardson Plumbing & Heating Co., Atlanta, Ga.*

*50 inch Water Line*

## In large apartments as well as in small homes

Selection of the Novelty Carburetor Boiler for this and a host of similar important installations throughout the nation is a fitting tribute to the newest patent boiler—the boiler with the carburetor.

The Carburetor Chambers (one to each section) on the rear of the boiler, automatically mix all smoke, soot or carbon, ordinarily wasted, with oxygen from the air and burn them. The air enters top and bottom slots in the rear of each carburetor, as shown in the picture. *No adjustment of air intake is necessary. Rate of combustion determines amount of air required.*

*Write for illustrated and descriptive booklet giving worth-while facts about space saving, low water line (50 inches) long life, and fuel saving.*

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## Insurance Company of North America

PHILADELPHIA

and the

*Indemnity Insurance Company of North America  
write practically every form of insurance except life*

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation**.

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## They'll be delighted *with its beauty*

The distinctive design and handsome finish of the Round Oak Gas Range will appeal strongly to your prospective buyers. Its good looks are lasting, too, thanks to the enameled doors and splashers. Uses the perfected four-way oven heating principle which in-

—sures uniform, economical baking. Let us tell you more about this and other Round Oak Ranges. Phone or write

## As The Editor Sees It

THE semi-annual report of building operations in Philadelphia for the first six months of this year, published in full on other pages of this issue of the GUIDE shows a decline in volume the first six months of this year compared to the first half year of 1923. The first half year of 1923 had a record of \$74,617,295, whereas in the first six months of 1924 only \$72,573,485 worth of building work was started.

In the first six months of this year permits were issued for 7,661 new buildings at an estimated value of \$62,435,010; alterations and additions, 4583 operations at an estimated value of \$9,411,195. Miscellaneous work amounted to 1,142 operations, costing \$727,280. Total work of all kinds for the first half year consisting of 13,486 operations amounted to \$72,573,485.

April of 1924 was the largest month on record for this year, \$18,946,260 was the estimated value of work started during the month. March, with \$15,756,560, was next in volume of work. The record for first six months of 1923:

### Estimated Cost for Each Month

Month	Permits	Operations	Estimated Cost
Jan. ....	747	967	\$ 6,504,100
Feb. ....	768	1,295	6,799,960
March ...	1,359	2,615	21,064,685
April ....	1,540	2,984	19,729,815
May .....	1,566	2,298	12,709,660
June ....	1,334	1,742	8,370,875

The record for the corresponding six months of 1924:

### Estimated Cost for Each Month

Month	Permits	Operations	Estimated Cost
Jan. ....	884	1,249	\$ 8,642,525
Feb. ....	956	1,454	7,173,885
March ...	1,610	3,322	15,756,560
April ....	1,582	2,675	18,946,260
May .....	1,735	2,731	10,940,375
June ....	1,577	2,040	11,108,880

The greatest increase in the six months from January 1 to July 1, 1924, over the same period in 1923 occurred in dwellings of the two-story type. In 1923, 4,892 operations costing \$25,530,830 were begun; in 1924, 5,487 operations costing \$30,079,560 were started.

Three story dwellings for the same period fell off slightly; only 229 operations, costing \$3,066,000, as compared to 250 operations, costing \$3,323,725. A marked increase in the number and cost of garages was manifested, 1,125 costing 2,213,060 in 1923, and 1,421 costing \$3,588,735 this year to July 1st. Manufacturing declined from 49 costing \$4,312,600 in 1923 to 37 costing \$4,282,760 so far this year. Office buildings likewise showed a drop in the six months in question compared to 1923. This year only 15 costing \$7,843,900; last year there were 29 costing \$8,070,200 started. In the number of schools there was a drop

from 10 costing \$4,794,755 to eight costing \$2,654,590. Tenement houses decreased over 50 per cent. in number, but increased in cost; in 1923 62 costing \$3,436,840 were started; the first six months of this year only 30 were started costing \$4,478,500. The largest class of buildings, in value, next to dwellings, was office buildings, in which 15, costing \$7,843,900, were started in 1924, and the first six months of 1923 twenty-nine costing \$8,070,200 were recorded.

Although the first six months of 1924 shows a decrease in value of operations started as compared to the corresponding period of 1923, there is an increase in the number of operations from 11,905 in 1923 to July 1st compared to 13,486 operations the first six months of 1924—an increase of 1,581 operations.

In two-story dwellings the forty-second ward shows the largest number of buildings started. A slight decrease in the number of dwellings started in this ward is noticeable. 1,727 were begun in 1923 first six months, and only 1,584 in the same period this year. The following wards showed an increase over the first six months of 1923 in the number of dwellings erected: 15, 21, 22, 23, 25, 31, 33, 34, 35, 38, 39, 40, 41, 43, 44, 46, and 48.

March leads in the number of houses erected in first half of 1924, with 1,920 dwellings of two story type. April had 1,159, May, 1,044.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## As The Editor Sees It

### REPORT ON PLUMBING

The Department of Commerce report on Recommended Minimum Requirements for Plumbing in Dwellings and Similar Buildings results from a widespread feeling that present state and municipal code requirements are in some respects unnecessarily restrictive and that conservation of labor and materials could be effected by scientific investigation of the burdens on such systems, and their performance under conditions of use. It is well known that the codes of different localities vary widely and that practices forbidden in some places are successfully employed elsewhere. The benefits of uniform requirements in permitting simplification of plumbing supplies also are generally recognized.

The development of plumbing code requirements and practice in installation of plumbing systems has been almost entirely in the hands of master plumbers and journeymen. Architects and builders have been too apt to disregard the importance of this feature of building construction and it results that no careful investigation has ever been made of the laws governing operation of plumbing systems.

This was the situation when Secretary Hoover, early in 1921, organized the Division of Building and Housing in the Department of Commerce to serve as a focus and clearing house for information useful to the building industry. It shortly became an important part of the Division's work to gather information on the subject of building and plumbing codes, with a view to more uniform and economical requirements, and a Committee of experienced sanitary engineers and plumbers was called together to consider the drafting of a recommended plumbing code. In order that this Committee might have at hand scientific data on the action of plumbing systems, arrangements were made to perform extensive tests with plumbing equipment at the Bureau of Standards in Washington. These experiments continued for over two years under the supervision of the Committee and afforded much valuable data which was analyzed and interpreted by that body in preparing its code of recommended requirements.

The report just published by the Department contains this recommended code and in addition a complete report of the experiments at the Bureau of Standards, showing how the Committee arrived at its recommendations.

The results indicate that present customary assumptions in the design of plumbing are considerably on the side of safety and point the way to substantial economies in future work of this sort. The Committee recommends that 3-inch soil stacks be permitted in systems for dwellings; that the running or house trap now required in many cities be omitted and that a distance of not to exceed 5 feet be permitted between traps and ventilation pipes. As a result of tests with

complete household systems it was found possible to eliminate much of the expensive vent piping now considered necessary. Economies possible through complete adoption of the Committee's recommendations are estimated at from 50 to 100 dollars for a 2 story dwelling with the usual number of fixtures, depending on the nature of requirements now obtaining in a given locality.

Consideration was given to the much discussed subject of plumbing code administration. The report states that while the relation of defective plumbing to disease is much less direct than formerly believed, the subject in all its branches is not yet fully explored, and the possibility of direct access of vermin from the interiors of plumbing systems to those of buildings is sufficiently objectionable to justify public regulation of plumbing work. The Committee recommends a competent official plumbing inspector under jurisdiction of public safety authorities, to examine and approve plans and specifications, test and approve plumbing systems and take such other measures as will make his control of plumbing work effective. The advisability is suggested of substituting certificates of competency for the present licensing system and of permitting owners to install plumbing personally, provided this is done in accordance with the code and subject to official permit and inspection.

The report contains 260 pages of text

McKeever, Heating Con-  
tractor, 247 W. 13th St.,  
N. Y. C.*

*50 inch  
Water Line*

## *Past Experience Selected the Boiler for this Mill*

The Propper Silk Hosiery Mill is situated in an exposed position with all four walls principally of glass. It presented a real heating problem.

However, the Heating Engineer had had ample opportunity to know what the Novelty Carburetor Boiler will do. His experience with two No. 10-40 and one No. 9-40 Novelty Carburetor Boilers in the new Park Avenue Baptist Church (the "Rockefeller" Church), together with his knowledge of what three No. 10-40 Novelty Carburetor Boilers had accomplished for him in the Guarantee & Trust Company, Jamaica, Long Island, was his assurance that all heating requirements would be adequately met by again specifying a

A side-feed, sectional boiler, the Novelty is admirably adaptable to the largest of buildings. The Carburetor Chambers (one to each section) on the rear of the boiler, automatically mix all smoke, soot and carbon with oxygen from the air and burn them. The air enters top and bottom slots in the rear of each carburetor, as shown in the picture. No adjustment of air intake is necessary. Rate of combustion determines amount of air required.

*Write for illustrated and descriptive booklet giving worth-while facts about space-saving, low water line (50"), long life and fuel saving.*

Co., Pittsburgh, Pa., \$134,000. Superstructure, Phoenixville Bridge Co., Phoenixville, \$214,800.

(Continued from page 451)

and one hundred illustrations, mostly given in connection with the report of experiments at the Bureau of Standards. It may be obtained from the Superintendent of Documents, Washington, D. C., for 35 cents per copy. Remittances should be by currency or money order.

With a view to stimulating an interest in the buying, building and furnishing of new homes, a Committee of prominent architects has been formed for the purpose of holding a Home Beautiful Exposition at the Commercial Museum in Philadelphia, next October.

It is planned to install 300 artistically decorated booths, wherein will be shown every conceivable thing that goes into the construction and furnishing of a home.

One of the features of the Exposition will be a six room bungalow, which will be complete from tile roof, stucco, a completely furnished bath room, to elaborate furniture, carpets and draperies. Wm. F. B. Koelle is the architect.

As "added attractions," a number of contests planned, one of which will be a bricklayers' contest with a prize of \$100 offered to the man who can lay the greatest number of bricks in one hour.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## As The Editor Sees It

**L**ENGTHENING the building season in the United States to include the winter months, was advocated today by Secretary of Commerce Herbert Hoover as a means of mitigating seasonal ups and downs in the construction industry, of stabilizing employment in the building trades and lowering costs of production and building.

Secretary Hoover's statement based on, and supplemental to, the report and recommendations of the Committee on Seasonal Operation in the Construction Industries, appointed by him as an outgrowth of the President's Conference on Unemployment, called in 1921, urges elimination of wastes caused by seasonal idleness through development of information as to probable future demands for labor and materials and the development of the habit of scheduling construction and repair work with reference to that demand. He reiterates the Committee's finding that custom rather than bad weather is responsible for building trades workers in most American cities working less than three-quarters of the year.

Calling construction the balance wheel of American industry, and placing the value of yearly construction in the United States at more than five billion dollars and the number of workers engaged in construction and manufacturing industries allied to building as mounting into the millions, Secretary Hoover declares activity in construction bears a close relation to general industrial conditions and

that irregularity in the ebb and flow in demand for construction seasonally to a large degree affects economic stability.

In his foreword to the report, Secretary Hoover said:

"The need to eliminate the wastes of seasonal idleness has been brought forcibly to the attention of the construction industry and the public by reason of high labor costs and the failure of the building trades to attract young men to their ranks." Prescribing a remedy he declares: "Lengthening the building season will mean greater production from the men now engaged in the building trades and will also go far to attract capable apprentices."

Secretary Hoover outlined the danger of seasonal instability in building, stating that: "If building falls off, there is bound to be a slackening in many other lines of industry, resulting in unemployment, decreased purchasing power of employees, and further depression."

He cited the need of organized community effort by representatives of the construction industries, the professions concerned and the public to find the facts as to local handicaps, peaks and depressions of employment and kinds of construction needed for elimination of wasteful customs. He urged public works as especially well adapted for scheduling with reference to seasonal as well as cyclical conditions, contending that efforts to encourage long-range planning of pub-

lic works deserve support of the public, legislators and public officials.

Explaining that remedy does not lie in any form of government regulation, the functions of the Committee are defined as having been to determine facts and "to point a remedy that is consonant with our national conceptions of individual and community initiative."

"The service rendered to our whole economic life by the elimination of these gigantic wastes and the conscious planning to overcome these irregularities, the improved conditions of labor, which is possible not only in actual construction, but in the material manufacturing industries, the lowered costs of production and of building which could result therefrom, are great warranty for such co-operation," Secretary Hoover concluded.

John M. Gries, Chief of the Division of Building and Housing of the Department of Commerce, and his assistant, James S. Taylor, conducted the national investigation for the committee, headed by Ernest T. Trigg, and his colleagues who were: John W. Blodgett, President National Lumber Manufacturers' Association; H. R. Daniel, assistant to the president, S. W. Straus & Co.; John Donlin, President building trades' department, American Federation of Labor; L. F. Epich, President National Association of Real Estate Boards; A. P. Greensfelder, Fruin-Colnon Contracting Co.; John M. Gries; J. A. House, President, The Guardian Savings & Trust Co.; Otto T.

Mallery; Rudolph P. Miller, consulting engineer; James P. Noonan, President, International Brotherhood of Electrical Workers; William Stanley Parker, Vice President of the American Institute of Architects; and Edward Eyre Hunt, Secretary. Information was furnished by government bureaus and trade associations while the Carnegie Corporation, American Federation of Labor, trade associations and others furnished limited appropriations to the committee.

The report sets forth that many seasonal ups and downs are preventable, that the past winter showed greater activity than ever before in what had been normally a dull season and this winter activity exerted a stimulating effect on building material producers and transportation companies and their employees. The report related that construction companies are awake to possibilities of winter activity and deserve the support and co-operation of the building public. It is explained the ups and downs place the heaviest burden on the employees and the public.

Bad weather effects on building have been greatly reduced, according to the report, which further holds that "with due precautions and proper equipment nearly all construction work can be carried on in winter and at no great difference in cost."

"As the methods of handling winter work develop, and as manufacturers, supply dealers and labor take more interest in encouraging winter work, the cost can be appreciably reduced," the Committee found.

The report explains that bankers may aid in cutting down the waste in construction costs by applying a wider knowledge now available, of data regarding characteristic trends in the construction industries.

"Forethought in planning ahead and use of information as to the seasonal trends will reduce interest on investments and will release investment funds for other productive uses," it is explained in this relation. "Trustees and others charged with large financial responsibilities have an opportunity and a responsibility for cutting down the present wastes."

Regarding public utilities, it is advised that the single leasing date be attacked as a demoralizing influence on seasonal currents of construction.

"Evidence is lacking," according to the report that "public utilities in general authorize the erection of buildings at other times than the usual building season," and "they might well set up 'expansion reserves' as a practical and profitable means for constructing additions during low seasonal and cyclical periods."

The Committee in its report states that out of 200 engineers in all parts of the country who replied to the Committee's

questions "Are public improvements rushed right along in the peaks of the annual building season?" one hundred ninety-two answered in the affirmative and the comment was frankly added that public works are undertaken without regard to private needs.

The committee is of the opinion that the need for public works is easily foreseen and that public officials responsible be given every aid so that they can let public works contracts when the work can be performed economically and with least interference with private construction.

The report carries a chart to aid in determining the best time of year to start new construction or repair work. This chart, it is stated, with other data may be obtained from the Division of Building and Housing of the Department of Commerce, Washington, D. C.

#### GETTING A HARD MONOLITHIC FLOOR FINISH

(Reprinted from *May Concrete*, Detroit, 1924)

"A job called for a 6-in. floor, either monolithic or top coat, left to my discretion," writes Philip Weiss, Philadelphia. "I started to lay it monolithic, but for reasons I had no control of I could not get the concrete of a consistency suitable for a monolithic finish. The finish called for hard trowelled finish with Master Builder filler. Ordinarily, I would have put on a 1-in. top coat, but as it was left to my discretion, I followed my own theory.

"I laid the concrete in such consistency that it did not *give* in tamping—which, by the way, I did not use—I believe that concrete should be laid with the rake in such a way that it needs no tamping. I rodded the concrete off with a 16-ft. 3-in. x 12 in. plank. Then I took top coat of the usual consistency and mixture (1 cement to 2 aggregate consisting of half sand and half stone grit), and rodded that in well with the 16-ft. straight edge. Of course I only used a very little top coat—what I could work in between the stones of the concrete. By doing that I got rid of all the raw surfaces of the concrete, which the cement finisher either covers over with a grout or drier, in either case it is detrimental, as the surface is not of a uniform texture. The reason I used a 3-in. x 12-in. plank is because it was the handiest thing on the job. But, in any case, I believe that the heavier the straight edge, the better the results.

"The top coat merely took the place of a heavy grout, the only difference is that in this case it was uniformly spread over the whole surface. The rest of the finish was as usual. First floated with a wooden float; then sprinkled with Master Builder; then floated and trowelled; then another very thin sprinkling of

(Continued on page 471)

(Continued from page 468)

Master Builder and another trowelling. We got a good hard trowelled surface.

"Necessity is the mother of invention. In this case, I had to use a thin coat of top dressing. But since then, I came to the conclusion that theory and logic would bear me out, that wherever a monolithic floor is called for for heavy traffic, it should get a light top dressing of stone grit top coat. Of course, the problem of intimate binding has to be well taken care of by thorough working in of the top dressing.

(Continued from page 471)

"As is well known, the sand and the larger aggregates have not the same working qualities. Also, it is impossible to grade the aggregate so that the smaller aggregates should fill all the larger voids: consequently we find, after a few years, an uneven surface with the larger aggregate protruding. I think that my theory of top dressing would obviate that shortcoming of monolithic concrete floors."

William Langhorne Co., General Contractors and Builders, formerly of 304 S. 50th St., Philadelphia, have moved their offices to 10 S. 18th Street, Philadelphia.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

### U. S. AGENTS REPORT ON BUILDING ACTIVITY

*Department of Labor Summary Shows  
Even Balance in Supply and Demand  
of Labor*

An even balance of supply and demand of labor in the construction industry is indicated as existing throughout the greater part of the country by the latest reports gathered by the U. S. Department of Labor. A summary of these reports of field agents is presented here.

The New England States generally report building conditions as active and giving employment to large numbers of tradesmen.

Practically the same story is told by states in the Middle Atlantic District. New York State says, "Building and construction activities continue at a very encouraging rate and have absorbed a good portion of the released mill and shop labor." While there has been some lessening in building construction in Pennsylvania building mechanics and laborers are fairly well employed. State highway and county road construction, combined with municipal, street and improvement activities have taken care of the released workers.

In the East North Central District, Illinois reports building construction as the most outstanding feature of the industrial employment situation. Indiana reports: "Generally at this season road work ab-

sorbs many of the unemployed, but the weather has retarded this work to a considerable degree. The building industry reports full employment at this time, but construction programs are not as large as they were a year ago. Requests for employment help are being received from the building industry in Michigan, and hard road contractors are absorbing a considerable number of labor surplus from other industries. Building is reported as "very brisk" throughout Wisconsin. Because of the activity of building operations in Ohio, common labor is being kept fairly well employed.

Quite similar situations are reported from the West North Central District. Minnesota road building work is absorbing workers temporarily released from other industries. There is a surplus of building tradesmen, although unemployment is nowhere a serious problem.

Highway construction is serving to aid the common labor situation in Minnesota. Heavy rains have retarded state highway work in Missouri, but this line of work will make heavy demands for common labor during the remaining months of the summer. Kansas highway work is utilizing much common labor. Employment conditions in South Dakota are considered generally satisfactory. A surplus of unskilled labor is reported in Nebraska.

In the South Atlantic District, Delaware states there are no very large building programs under way but there is suffi-

cient work going on to employ the majority of building tradesmen. Building programs of considerable size are under way in many parts of Maryland and road building is in full swing. A large amount of road construction and much general building is reported in West Virginia. Building tradesmen are well employed in the District of Columbia. Fair-sized building programs and state road work are employing the majority of skilled and unskilled workers in Virginia. Skilled labor is very well employed on building work in North Carolina. Fair-sized programs are reported in the larger cities of South Carolina. A surplus of common laborers is evident in some sections of Georgia, but resident tradesmen are well employed. The supply of unskilled labor in Florida is meeting demand.

In the East South Central District Kentucky reports that skilled workmen are very well employed on programs of building and construction work. The construction of 75 miles of road and 22 bridges in Tennessee, soon to be started, will absorb a large amount of labor, the report says. Though a surplus of labor exists in Mississippi, there is no serious amount of unemployment. Highway construction shows an increase of 40 percent in one month.

Louisiana's road and building programs are keeping tradesmen busy, as is also the case in Arkansas. Building construction continues steady in Oklahoma, but some

1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

surplus of tradesmen still exists. A large amount of building is reported in all sections of Texas.

Building and general construction continue moderately active in New Mexico. The surplus of carpenters which has been existing in Arizona now has practically disappeared. Utah reports good employment. Many miners have been given temporary employment on road projects in Wyoming, though there has been a slowing-up in building activities in that state. Nevada reports more laborers and mechanics seeking work in the building trades than can be employed. A sufficient supply of workers is reported in Idaho, and in Montana. General construction work in Colorado is furnishing employment to large numbers.

In the Pacific group, California reports that transient building tradesmen have eliminated any chance of a labor shortage, though building operations are proceeding on a large scale. Oregon reports good employment. Washington's demand for building tradesmen balances supply, and large highway and hydro-electric projects are taking care of a large surplus released from sawmills and logging camps.

Building industries, with more than two million workers, are so operated that many crafts are out of work three months each year. This was revealed by a nation wide survey of the building situation instigated by Secretary Hoover, of the Department of Commerce, to determine why building construction could not be carried on the year round.

The survey was an outgrowth of the Committee on Seasonal Operations in the Construction Industries of the President's Conference on Unemployment, whose purpose is to stimulate employment, to eliminate waste and to reduce costs.

"Few workers have an opportunity to work more than nine months," the report says. "Earnings in nine months must be sufficient for twelve months' living. The calendar months of work and of idleness are different for different

crafts, and are less related to climate than to customs created by employers. A change in this situation is worthy of painstaking study by everyone connected with the construction industries because of the large savings such a change would bring not only to the industries concerned but to the nation as a whole.

"The ideal condition would be steady employment for all competent workers throughout the year. Bad weather is by no means the only handicap that makes it difficult to approximate such a condition. Some time is lost while one trade waits for another to complete work before its own activities can begin. Careful planning by the contractor will help to cut down this lost time."

The survey included requests for information on the employment of workers in the different building trades in each of the 68 largest cities of the country and in a number of smaller communities.

The introduction of modern machinery and newer methods in building construction has made building possible with very little regard to weather conditions, according to the report of a nation wide survey conducted by the Department of Commerce under Secretary Hoover to determine why building could not be carried on the year round.

"Construction with steel has gained an independence of the weather because of the hoisting engine and air-driven tools," the report says.

"The hoisting engine was adapted for building purposes about 1895. It not only lifts heavy parts to place without the risk attendant upon raising by hand, particularly in cold and wet weather, but also makes it possible to raise heavier pieces than could be raised by hand. It eliminates much of the labor and most of the accidents which occurred when laborers crawled up uncertain ladders with loaded hods, or up slippery planks with heavy wheelbarrows in inclement weather.

## *Again Satisfaction With One Installation Leads To Another*

*A smokeless boiler. Made small enough for homes. Large enough for churches, schools, theatres, office buildings, factories, etc.*

In 1921 two No. S 16-40 Novelty Carburetor Steam Boilers were installed in the Argyle & Brent Bldg., Kansas City, Mo. The total boiler capacity was 33,000 feet—16,500 feet for each boiler.

In April, 1922, the Heating Engineer reported, "It has never been necessary to operate more than one boiler. After burners being out overnight, steam pressure is raised within fifteen minutes after lighting. Under such conditions of rapid steaming the water line is always without any fluctuation."

The owners of the Argyle & Brent Bldg. own three other buildings, adjoining one another: Laritz, 6 stories; Goodyear, 6 stories; and Business Block, 8 stories.

So satisfied were they with the first installation that last year the heating plants in the other three buildings were replaced with one installation of two No. 20-40 Novelty Carburetor Boilers—total rated capacity 48,000 square feet.

Cheap fuel oil used by both installations—but either will burn hard or soft coal with equal efficiency.

The Carburetor Chambers (one to each section) on the rear of the boiler, automatically mix all smoke and carbon with oxygen from the air and burn them. The air enters top and bottom slots in the rear of each carburetor, as shown in the picture. No adjustment of air intake is necessary. Rate of combustion determines amount of air required.

*Write for illustrated and descriptive booklet giving worth-while facts about space-saving, low water line (50"), long life and fuel saving.*

Contract awarded to Dravo Contracting Co., Commercial Trust Building, Philadelphia, \$506,250. Superstructure. Contract awarded to Phoenix Bridge Co., Phoenixville, Pa., \$795,800.

## Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., July 25, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., August 26, 1924, for the construction of a one-story brick and terra cotta semi-fireproof Post Office building, approximately 70 by 50 feet in size, at Walden, N. Y. Drawings and specifications may be obtained from the Custodian of the Site at Walden, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 484)

"The application of compressed air also has increased the possibilities of all year round building. Compressed air in building was first utilized about 1900 to meet the demand for more economical riveting of the joints in steel structures.

The pneumatic hammer greatly decreased the labor and time needed for riveting—no small matter when the steel worker's complete exposure to the elements is considered.

Rivets formerly were heated in coal burning forges and were thrown and caught by the riveting crews. Many were the fires and accidents due to sparks, overturned forges and misdirected rivets. The latest equipment heats rivets by gas or oil flames or by electric currents passed through them. Rivets are heated nearer the place where used and most of the former dangers eliminated."

Individuals concerned with building are urged to do their share in contributing to all year round building operations by scheduling new work and repair work at a time when the pressure of general building is not at its height. Data on the subject of seasonal construction in general may be obtained on application to the Division of Building and Housing, Department of Commerce, Washington, D. C.

## ENCOURAGEMENT

If, when final calculations have been completed, it be found that, as predicted by President H. A. Smith at the Annual Meeting of the National Board of Fire Underwriters, American fire losses for 1923, on the basis of preliminary figures, aggregated \$508,000,000, then on the part of fire preventionists there will be warrant not, indeed, for satisfaction, still less for rejoicing, least of all for relaxed effort, but for sound hopefulness. There is a measure of encouragement in the showing, in view of the usual tremendous annual increases since 1916.

It has come none too soon. Many of those who have been zealous in the cause, watching the rate of advance soar dizzily each year, sometimes have been tempted to wonder if, after all, the habits of a nation could be turned into ways of fire-safety.

This, it now appears, has begun gradually to be accomplished. Should the estimate of \$508,000,000 prove to be correct, it will mean that the twelve-month increase since the last report was but \$2,000,000—by far the smallest in several years. Coupled with the acknowledged inflation of property values which has persisted from the early days of the War, and which of course has been reflected in all loss totals, the 1923 exhibit, though serious enough from an economic standpoint, is a sanguine one, viewed relatively. There is in it, however, no slightest excuse to rest or even to slacken. By the growing army of fire prevention campaigners it will be seen, properly, as a summons to renewed struggle, in which there is cheering promise of ultimate victory.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## Insurance Company of North America

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation**.

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## As The Editor Sees It

### STANDARD CONTRACT FORMS SOON READY

The standard contract forms for construction of buildings and for engineering construction are now being printed and will soon be available for distribution. Copyright and other details connected with the two documents have been cared for, and the culminating phase of work which has extended over a period of three years is now being entered.

The Joint Conference on Standard Construction Contracts has concluded its work on the two contract forms. They now are to be transmitted to each of the interested associations. They will be adopted by some of these bodies and approved by others, while some of the organizations have made no provision except to receive the committee suggestions.

In the form in which they are now being submitted, these contracts may be justly considered as representing the best thought upon details which entered into their formulation.

The following resolution was adopted May 20, 1924, by the joint conference composed of representatives of the nine associations interested in the movement:

"WHEREAS, The Joint Conference on Standard Construction Contracts has spent over two years in investigating, discussing and formulating contract provisions for use in construction work, and has twice during that time printed and

distributed for discussion and criticism the tentative provisions developed; and,

"WHEREAS, During this procedure the various groups of thought presented have been analyzed and co-ordinated into contract provisions, based upon sound economics, and designed to establish more uniform contracting practice; and,

"WHEREAS, The Conference recognizes that certain National Associations are reluctant to accept a universal contract form without modification of some of its provisions for their particular needs, but believes that in time a practical uniformity of contract practices can be established if leading National Associations interested in construction will endorse and recommend use of the principles approved by the Conference; and,

"WHEREAS, The Conference has adopted a contract form for building construction, and a form for general engineering construction, which in its judgment presents the best practice that the architectural engineering and contracting world is now prepared to accept, *therefore be it*

"RESOLVED, That these two contract forms be submitted to each of the constituent bodies of the Conference with the urgent request that each confirm the conclusions of the conference, and that these contracts be used wherever possible to the exclusion of other contract forms and with as little change or modification

as possible."—*Associated General Contractors of America.*

### SEASONAL OPERATION IN THE CONSTRUCTION INDUSTRIES

*Summary of Report and Recommendations of a Committee of the President's Conference on Unemployment\**

Custom, not climate, is mainly responsible for seasonal idleness in the construction industries. Contrary to popular belief, bad weather is not the principal cause of variations in employment from month to month. The present survey shows that seasonal idleness is not confined to regions where climate is severe. Cities in the South and on the Pacific coast are affected much like those on the Canadian border.

It is the general rule that the building trades are occupied wholly for only three to five months in the year, and practically all the cities studied show a large percentage of idleness in these trades not only from December to March, but in other months as well.

Many of the seasonal ups and downs are undoubtedly preventable. During

\*Asbestos workers, steam fitters, and some smaller allied trades are differently affected than other classes of construction workers.

**DRAWING

**BLUE  
PRINTS**

the past winter (1923-24) there has been greater activity than ever before in what normally is the dull season and this activity has had salutary effects on the building-material producers, the transportation companies, and their employees. The construction industries are grappling with the problem; they now need and should have the support of the general public.

For the burden of idleness falls most heavily not on the producers and distributors but on the employees and the public. Construction costs are high in part because of the seasonal hazard, which affects each step of the construction process from felling timber, quarrying rock, manufacturing brick, cement, tile, plaster, and a hundred and one other commodities, transporting these materials by railway, waterway, and highway, distributing them through retail supply dealers, clearing of site and excavating, to the completion and furnishing of the finished building. Idle time represents waste and direct losses to the construction industries, the workers, and the public.

The art of construction has advanced to such a point that the effect of bad weather on building operations has been greatly reduced. The survey shows that there is today much less manual labor on the job than formerly; a greater proportion of the work is done in factories or by power machinery, which is less affected by the elements than hand labor. Steel and concrete construction with certain safeguards can go forward at low temperatures. Methods of winter construction developed by leading contractors should now be greatly extended. Winter work is being done in some more cases cheaply than summer work, and in others at an increase in cost which is slight compared with the advantages of holding down the contractor's overhead expense by keeping his organization together, the shorter time that the owner's capital is tied up in the operation, and the earlier date at which occupancy is made possible.

In order to secure a better distribution of construction activities throughout the year the facts in the case of each community must be determined and the community must be made aware of them. Organized group efforts started by the various local elements interested in construction affords the best channel for obtaining and circulating the facts.

#### *Information Needed*

In every city the facts on average and extreme weather conditions affecting construction should be made available. This important information can be obtained from the local Weather Bureau.

In addition to this basic information the customary peaks and depressions in

employment of each of the principal trades should be recorded. Such data, checked by records of retail sales of materials and records of architects, contractors, and labor organizations, must be available to furnish the framework for any thoroughgoing campaign to eliminate seasonal idleness. The fact-finding survey should include a study of construction, maintenance, and repairs by classes, such as residential, industrial, business and commercial, hospitals, church buildings, public utilities, public buildings, public works, and streets and roads, to show which can adjust its program with benefit to the community. The costs of present practice should be set forth in terms of time lost, of money wasted, and of new construction needed. The public requires a striking presentation of the facts in order to be moved to act.

#### *Responsibility Rests Largely with the Public*

Forethought in planning new construction and repair work is necessary if a marked betterment in conditions is to be brought about. Practically any owner can find out how to schedule his building or repairs to take advantage of the time when competent workers will probably be available and when the contractor will not have to resort to "snowballing" to obtain workers. The majority of owners do not take into consideration their own financial interest or that of the construction industries and workers in this respect.

Besides scheduling their construction and repair work citizens may use their influence in modifying prevailing customs and in securing a proper scheduling of public works.

#### DATA ON STRUCTURAL MATERIAL

Values of the strength of pure metals and their alloys, and of wood are given in the revised edition of the Bureau of Standards circular on the physical properties of materials. The data include the strength in tension, compression, and in shear, the resistance to fatigue, and many other properties which an engineer must know in order to design a structure that will safely carry its intended load. The effect of high temperatures on the strengths of different metals is shown by tables and by graphs, and the physical properties such as specific gravity, melting point, and co-efficient of expansion are given.

The information given is compiled from various sources, including tests made at the Bureau of Standards. The data on wood are taken from Bulletin 556 of the United States Forest Service, Department of Agriculture. Most of this

## Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., July 25, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., August 26, 1924, for the construction of a one-story brick and terra cotta semi-fireproof Post Office building, approximately 70 by 50 feet in size, at Walden, N. Y. Drawings and specifications may be obtained from the Custodian of the Site at Walden, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 31, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., August 28, 1924, for New Water Pumps, etc., U. S. Quarantine Station, Reedy Island, Del. Drawing and specifications may be obtained from this office or at the office of the Custodian, U. S. Quarantine Station, Reedy Island, Del., in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 500)

material has been available before, but in such a scattered form that considerable searching might be required to secure necessary information. The first edition was issued in 1921. The present edition contains a large amount of new material, much of which has been published since that time.

These data are given in Circular 101 of the Bureau of Standards, Department of Commerce, entitled "Physical Properties of Materials." Copies may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. The price is 40 cents.

Plans for the Home Beautiful Exposition to be held at the Commercial Museum in October are going forward by leaps and bounds, according to Andrew C. Borzner, Chairman of the Architects' Exhibits Committee. It is estimated that 300,000 people will visit the Show, which it is hoped to make the largest building construction and home furnishing Exposition that was ever held in the City, and in it show everything that is

newest in building materials and things that go into the home.

Thousands of engraved invitations will be sent out by the Architects who are sponsoring the Exposition, and it is hoped to have everyone who is in any wise interested in the building industry on hand, while a special drive will be made to bring out the women folk, it being the consensus of opinion among architects that when building a home a great many points are decided by the fair sex.

An outstanding feature of the Exposition will be the great number of concerns exhibiting stucco, which testifies to the ever increasing popularity of this material.

An exhibit by the T-Square Club is also planned as a feature of the exhibition, in which members of this organization will endeavor to bring out just how much more essential it is to engage the services of an architect today than it was in the past. With the modern conveniences and appliances such as are coming into general use the architect is confronted on every hand by problems which he has to solve that were unheard of a few years ago. Door beds, telephone niches, radios, many new ideas in electrical appliances, wall ironing boards, and permanent furniture in breakfast rooms are the questions which the architect has to contend with.

"I am satisfied this show will mean a great deal to the home buyers of Philadelphia and vicinity," said Wm. F. B. Koelle, the Chairman, "for people can come out to the show and in a couple of hours get a better idea of building materials, construction and home furnishings than they could by spending a week meandering around among brick yards, lumber yards and department stores, and many will see things they never knew existed."

The Committee which is co-operating in holding the Exposition is made up of the following:

Wm. F. B. Koelle, General Chairman, Andrew C. Borzner, Chairman Exhibits Committee, Thomas Edward Ash, Jr., Duffield Ashmead, Jr., Amos W. Barnes, S. Brian Baylinson, Carl P. Berger, Max A. Bernhardt, George Howard Bickley, Wesley Leshner Blithe, Arthur H. Brockie, G. Edwin Brumbaugh, Bunting and Shrigley, Morgan Bunting, John J. Carroll, Geo. W. Casey, Horace W. Castor, C. Wharton Churchman, Ralph L. Colton, John L. Coneys, Edward A. Crane, Paul P. Cret, Henry D. Dagit, Jr., Day & Klauder, Clarence DeArmond, DeArmond, Ashmead & Bickley, W. W. Donohoe, Frederick W. Dreher, Dreher & Churchman, J. H. Druckenmiller, Druckenmiller and Williams, John J. Dull, Walter K. Durham, Durham Brothers, Victor Eberhard, Byron H. Edwards, Edwards & Green, Allen

Evans, Wilson Eyre, Furness Evans & Co., Raymond Gleeson, Alfred Green, Fred N. Greisler, Frank E. Hahn, John F. Harbeson, James Russell Harris, Samuel D. Hawley, Norman Henline, Oscar M. Hokanson, Walter D. Karcher, Thomas M. Kellogg, Albert Kelsey, Guy King, Charles Z. Klauder, H. E. Kleinfelder, John W. Lachman, Lachman & Murphy, I. W. Levin, J. Gilbert McIlvaine, MacKenzie & Wiley, Lewis P. MacKenzie, Magaziner, Eberhard & Harris, Louis Magaziner, Alfred H. Megrail, G. Harold Murphy, Stanley K. Neubauer, Neubauer & Supowitz, Oliver Randolph Parry, Watson K. Phillips, William C. Prichett, Charles F. Rabenold, John Hall Rankin, Rankin, Kellogg & Crane, Henry L. Reinhold, Jr., Verus T. Ritter, Ritter & Shay, Edward A. Roth, Edward L. Rothschild, Louis H. Rush, George E. Savage, Albert H. Savery, Savery & Scheetz, Wm. C. Scheetz, C. E. Schermerhorn, Frank Seeburger, Howell Lewis Shay, Arthur Shrigley, H. Rex Stackhouse, Jesse L. Stetler, Stetler & Deyster, F. Russell Stuckert, Stuckert & Co., David Supowitz, Alfred Lewis Ward, Frank R. Watson, Joseph H. Wiley, Carl H. Williams, Wilson, Eyre & McIlvaine.

The Van Seiver Corporation and associate companies, the largest miners and distributors of sand, gravel and allied building materials in the Philadelphia territory, have just announced their acquisition of the sand and gravel plants located at Morrisville, Pa., and formerly owned and operated by the Curtis & Hill Sand & Gravel Company.

This addition to their already large resources will increase the daily output of sand and gravel by the Van Seiver Corporation to 3,000 tons per day. Improvements will be made immediately, whereby the tonnage will be increased to 5,000 tons per day. Shipments from this plant are made by way of the Pennsylvania Railroad. The facilities at Morrisville, Pa., for the loading of trucks will be maintained.

The Van Seiver Corporation will have the exclusive sale of all of the products of this modern plant, and Mr. T. P. McCue, well known in the sand and gravel industry, and for a number of years connected with the Curtis & Hill Sand & Gravel Company, will be actively engaged in the Sales Department of the Van Seiver Corporation.

All contracts made by the Curtis & Hill Sand & Gravel Company prior to August 1st, 1924, for the shipment of sand and gravel from Morrisville, Pa., will be assumed and fulfilled by the Van Seiver Corporation.

On and after August 1st, 1924, all orders will be received by the Van Seiver Corporation at their Wholesale Order Department located on the Parkway at 24th Street, Philadelphia.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## As The Editor Sees It

### ORIGINALITY

The charge is sometimes made that there is no originality shown in the architecture of today. In fact, the extreme view is that there has been nothing new in the history of architectural development since the Middle Ages. As all readers know, such charges have been met by those well qualified to meet them. Those making the charges may still hold to their opinions yet most of us feel that the defense of the Renaissance Movement has shown that it was not without originality and inspiration, nor without justification.

To the extremists, what does originality mean? If originality means the production of that which is unprecedented and unparalleled, then their charges would be just. But to the majority, originality does not imply a sudden and total departure from all that has gone before, nor the defiance of all precedent and all tradition. Such a departure would not be acceptable to humanity at large, nor would anything that is good or lasting in art be expected to come of it.

The history of any art or of any science is a development. Nothing that is absolutely and entirely new in art has ever been produced in any given age, by any nation or people. Surely no individual or group of individuals could hope to do at once what a nation has not done. No attempt to create a new order of architecture or an entirely new style in art has ever been more than a short-lived move-

ment which has contributed nothing lasting to the world. Any given order or style of architecture represents centuries of growth and some four thousand years of growth are represented in what we have attained today. There have been periods of decadence and there have been revivals of styles of former periods. Periods of decadence are followed by reactions and while a revival is in the nature of an excursion, rather than a step in the direct line of progress, it is not without its good effect. True progress would not consist in a series of revivals; but the revival of a former style may mean gaining new inspiration from an old source, with consequent benefit.

In a nation as young as this one, with all of its traditions inherited from the mother countries of those who have combined to make it, a style of architecture that is entirely of this country is not to be expected. Even in its relatively short period of development, the architecture of this country has shown unusual progress.

To say that a new style in architecture can only result from new structural principles is trite, but nevertheless true. The rapid development of steel skeleton construction, as well as that of reinforced concrete, presented problems in exterior design which could not at once be solved. There have been many attempts to express the facts of a steel frame in a clothing of masonry. In this, we have made little more than a beginning. There

are a few outstanding examples which are signally successful. The "base, shaft and capital" treatment which early became accepted for tall buildings, with the use of forms that belong to an architecture of stone masonry construction, has lacked that which would have fully justified it. The more recent tendency has been to reduce masonry, to increase openings, to acknowledge vertical and horizontal steel members and to do away with great overhanging cornices. The "gradually reducing mass" which in some instances has been devised to comply with city building and zoning laws, is more logical and more appropriate than the exaggerated cornice. The termination of some of our most successful tall buildings has been accomplished in this way.

Not only in commercial buildings have the architects of this country made progress. Notable among the buildings which made great advances is the American country house. We have had the experience of all times and all countries by which to profit; and there is scarcely a civilized country that has not had its influence to a greater or less degree. This, of course, has resulted many times in styles that are imported or exotic; but this is not the usual rule. Nor is a combination of incongruities in any way typical of the American house. Some of the best examples of modern country house design show influences which could be traced to a variety of sources, yet they are so combined and adapted that the re-

**DRAWING

**BLUE  
PRINTS**

sult is that of unity, harmony and appropriateness.

The architectural profession is not without its copyists. There are those who lack originality and independence but they are in the minority. Certain designs have become stereotyped and standardized. The bank building or school building which does not represent a formula is to be commended.

No system of elementary training has been devised which takes the place of a thorough study of the orders of architecture. Although the individual may never express himself in terms of column and entablature, the lessons in scale and proportion which the orders teach give a working knowledge and a refinement which can be acquired in no other way. The designer who is best grounded in architectural history and tradition is likely to attain the most originality with the greatest success.

Construction and material for their own sake have come to be much more generally and fully appreciated. The frank expression of construction, together with the use of appropriate materials enhanced in effect by good craftsmanship will elevate a building far above the commonplace.

That which is best in building is that which is most genuine. The great stone arches of an aqueduct, which are beautifully proportioned and meet all static requirements, have never been surpassed as examples of beauty in construction. The modern steel bridge that is perfect from the standpoint of engineering may be of no less beautiful. Where every member is correctly proportioned and placed to serve its structural purpose in a faultlessly designed network of steel, pure utility may result in the acme of beauty. Its beauty lies not in its detail, but in the structure as a whole.

The ancient temple, the Medieval cathedral or the modern structure may each represent the best of its kind. Each is true to certain ideals, and each is good from its own standpoint.

Modern design is far from being at a

standstill. When the best work of today shows constant modification and adaptation with an avoidance of imitation, we can hope for the development of a style that is fully as expressive of this age as any earlier style is of its own.—*Edgar R. Thayer in Architecture and Building.*

#### PRINCIPLES OF BUSINESS CONDUCT

(Adopted by Chamber of Commerce of the United States) . . .

**THE FUNCTION OF BUSINESS** is to provide for the material needs of mankind, and to increase the wealth of the world and the value and happiness of life. In order to perform its function it must offer a sufficient opportunity for gain to compensate individuals who assume its risks, but the motives which lead individuals to engage in business are not to be confused with the function of business itself. When business enterprise is successfully carried on with constant and efficient endeavor to reduce the costs of production and distribution, to improve the quality of its products, and to give fair treatment to customers, capital, management, and labor, it renders public service of the highest value.

We believe the expression of principles drawn from these fundamental truths will furnish practical guides for the conduct of business as a whole and for each individual enterprise.

##### I.

**THE FOUNDATION** of business is confidence, which springs from integrity, fair dealing, efficient service, and mutual benefit.

##### II.

**THE REWARD** of business for service rendered is a fair profit plus a safe reserve, commensurate with risks involved and foresight exercised.

##### III.

**EQUITABLE CONSIDERATION** is due in business alike to capital, management, employes, and the public.

*A cast iron, sectional feed, up-draft, low water line (50"), smokeless boiler. Easy to install, simple to operate, exceptionally durable.*

ST. BERNARD'S SCHOOL, CHURCH AND PARISH HOUSE, BRADFORD, PA.

*All three buildings heated by one installation of three No. 8-40 Novelty Carburetor Boilers. Radiation, 13,000 Sq. Ft.*

*Architect: North-Shelgren-Swift, 511 Crosby St., Buffalo, N. Y.  
Heating Contractor: W. Hugh McQuilken, Bradford, Pa.*

## How the Architect Solved this Problem

The architect faced a trying situation in planning the new School Building for St. Bernard's Parish, Bradford, Pa.

The Church, about 150 feet away from the site of the School, was fitted with a steam heating system. The Parish House, about 300 feet away from the School site, was equipped with hot water heat. In the interests of economy and convenience it was found desirable to combine these two dissimilar heating systems with the new heating system to be installed in the School.

The architect solved his problem with utmost satisfaction, thanks to the adaptability of the Novelty Carburetor Boiler. The hot water pipes and radiators in the Parish House were not disturbed—the water is heated by steam from the Carburetor Boiler. The radiating system in the Church was simply disconnected from the old boiler and connected to the Novelty through underground mains. All three buildings are assured of all the heat required, even on the coldest days, yet on warm days or days when one or two of the buildings are not in use, no fuel is wasted, because any of the three Novelty No. 8-40's can be shut down as desired.

A side-feed, sectional boiler, the Novelty is admirably adaptable to large buildings. The Carburetor Chambers (one to each section) on the rear of the boiler, automatically mix all smoke, soot and carbon with oxygen from the air and burn them. The air enters top and bottom slots in the rear of each carburetor, as shown in the picture. No adjustment of air intake is necessary. Rate of combustion determines amount of air required.

*Write for illustrated and descriptive booklet giving worth-while facts about space-saving, low water line of 50", long life and fuel saving.*

(Continued from page 516)

### IV.

**KNOWLEDGE**—through and specific—and unceasing study of the facts and forces affecting a business enterprise are essential to a lasting individual success and to efficient service to the public.

### V.

**PERMANENCY** and continuity of service are basic aims of business. that knowledge gained may be fully utilized, confidence established and efficiency increased.

### VI.

**OBLIGATIONS** to itself and society prompt business unceasingly to strive toward continuity of operation, bettering conditions of employment, and increasing the efficiency and opportunities of individual employees.

### VII.

**CONTRACTS** and undertakings, written or oral, are to be performed in letter and in spirit. Changed conditions do not justify their cancellation without mutual consent.

### VIII.

**REPRESENTATION** of goods and services should be truthfully made and scrupulously fulfilled.

### IX.

**WASTE** in any form—of capital, labor, services, materials, or natural resources—is intolerable and constant effort will be made towards its elimination.

### X.

**EXCESSES** of every nature—inflation of credit, over-expansion, over-buying, over-stimulation of sales—which create artificial conditions and produce crises and depressions are condemned.

### XI.

**UNFAIR COMPETITION**, embracing all acts characterized by bad faith, deception, fraud, or oppression, including commercial bribery, is wasteful, despicable, and a public wrong. Business will rely for its success on the excellence of its own service.

### XII.

**CONTROVERSIES** will, where possible, be adjusted by voluntary agreement or impartial arbitration.

### XIII.

**CORPORATE FORMS** do not absorb from or alter the moral obligations of individuals. Responsibilities will be as courageously and conscientiously discharged by those acting in representative capacities as when acting for themselves.

### XIV.

**LAWFUL CO-OPERATION** among business men and in useful business organizations in support of these principles of business conduct is commended.

### XV.

**BUSINESS** should render restrictive legislation unnecessary through so conducting itself as to deserve and inspire public confidence.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## Insurance Company of North America

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation**.

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## As The Editor Sees It

### FIRE-STOPPING IN DWELLING CONSTRUCTION

BY DUDLEY F. HOLTMAN

*Construction Engineer of the National  
Lumber Manufacturers' Association*

**I** PREVIOUSLY have made the statement that fire-stopping in dwelling construction is as rare as a well-spent life. And there are many more dwellings which contain no evidence of fire-stopping details than there are persons willing to assume responsibility for the omission of those details.

These inexpensive construction expedients which will help reduce the excessive toll of the fire loss to the country should be peculiarly worthy of study. And it is desired to emphasize at this point that it is just as essential that fire-stopping be employed in those houses whose exterior walls are built of masonry as in those houses whose exterior walls are built of lumber. The lumber-built house adequately fire-stopped is a safer structure than the masonry-walled house with no fire stops.

#### *Materials for Fire Stops*

Fire-stopping materials are numerous. Any material or combination of materials that will effectively accomplish the purpose of concealing open spaces in the walls or floors so that air cannot pass may be considered suitable fire-stopping material. Lumber fire stops, consisting usually of solid blocking, are economical, inexpensive and easy to install.

Incombustible fire-stopping materials, such as mineral wool, crushed mortar, plaster, concrete, hollow tile, or gypsum block may be used as dry fill. Loose boiler cinders form one of the best fire-stopping materials.

A mixture of sand and gravel with cinders, ashes, or even dry earth, will likewise serve the purpose. The weight of sand or gravel alone would be objectionable if supported by metal lath and the same would be true of crushed concrete. An inexpensive fire-stopping may be provided by inserting a basket of wire netting covered with plastering.

#### *Methods More Important Than Materials*

It is not so much the material, however, as correct methods which I desire to emphasize. Those methods, which I am about to enumerate, will completely and effectively fire-stop not only the lumber-built house but, with very slight modifications, may be made to prevent the spread of fire in masonry veneered houses and masonry wall houses. For this reason, the lumber-built house will be discussed first.

There are three general types of lumber-built houses, those with framing known as balloon framing, those with framing known as western framing, and those with framing known as braced framing.

Balloon framed buildings are those in which the supporting studs extend from the foundation to the eaves (a ribbon or

ledger board let into the studs forms the support for the joists.)

Western framed buildings are those in which the supporting studs extend from the top of each tier to the underside of the tier next above (the studs are provided with top plates and sole plates).

Braced framed buildings are those in which solid corner posts extend from the foundation to the eaves with joists supported on heavy girts framed into the posts (the studs are cut in between the girts and heavy knee braces are provided at all corners at each floor level).

The braced frame type of lumber-built houses was brought from Europe by early New England and Colonial builders, and still survives in some sections of the country. Rigidity and strength are its outstanding characteristics, but because of its cost it is not in common usage in present-day construction where speed and economy are likely to receive first consideration. The tendency, therefore, in most localities, is to displace the braced frame with either the balloon or the western type of framing.

#### *Balloon-Frame Buildings*

The exterior walls of balloon framed buildings should be fire-stopped at the sill and between the studs in the form of bracing placed at an angle of not less than 15 degrees nor more than 30 degrees from the horizontal to avoid possible openings due to shrinkage and at the same time to stiffen the frame. The last named

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

detail is often called herringbone bracing. Where the ends of joists are supported on a ribbon let into the face of the studs, two fire stops are required. One should be between the studs to prevent vertical drafts and the other should be between the joists to prevent horizontal drafts from passing through ducts formed by the studding and the surfacings on each other.

To further increase the value of this particular fire-stopping construction, it is only necessary to fill the spaces with loose incombustible material. The method of fire-stopping the partitions in this type of frame house consists of placing the fire stop at right angle to the joists.

#### *Western-Framed and Braced*

Western frame and braced frame construction, the other two types of frame construction, require very little fire-stopping. Where studs are set upon a sole, no fire-stopping at the floor line is required, except that necessary between the joists to prevent horizontal drafts. A similar situation is encountered in the outside wall construction at the junction of the floors and walls.

The general principles of fire-stopping applicable to frame houses apply also to masonry veneered and masonry walled houses with the exception of slight differences necessitated by the open space between veneering and sheathing on the one hand and by the furring on exterior and interior masonry walls on the other. Joists which parallel masonry walls also require special treatment.

#### *Masonry Construction*

In the case of houses veneered with masonry, a space is generally left between the veneering and the sheathing of the frame wall. A fire within this space is an exceptionally difficult one to locate exactly.

For this reason, the space between the veneering and the outside surface of the frame wall should be fire-stopped not only horizontally but also vertically, at intervals of at least three feet. The horizontal lumber strips will accumulate sufficient mortar droppings to act as an effective seal and perform fire-stopping functions satisfactorily.

When the stops are set close together in this space a fire cannot spread over any considerable area, and the fire department need not wreck the entire wall to get at the center of action.

Where masonry walls are furred, the masonry between the ends of the lumber joists should project to the thickness of the furring beyond the inner face of the wall either the full depth of the joists or a double course above and below. Equally effective is the method which continues the inner face of the wall flush and places horizontal furring strips above and below the joists.

Where walls are studded off, as is sometimes done in a stairway in order to maintain a plane surface, the space between the inside face of the wall and the studding at the floor level should be fire-stopped with brickwork or other incombustible material.

In cases where beams or joists are parallel to masonry walls, there should be a space of at least two inches between such walls and the nearest joints. This space should be filled in solid with brickwork, concrete, or loose incombustible material for the full depth of the joists.

These fire-stopping places which I have mentioned are not the only opportunities in house construction for protection against fire. There are fully as important places in interior wall construction. Among these are opening at stairways, sliding doors, clothes chutes, and around pipes.

Attention should also be called to the spaces between the attic and roof; back of or over porches; and between the basement, which houses the heating equipment, and the first floor.

#### *Duty of the Home-Owner*

I feel that there is no need on my part to convince readers that fire-stopping is important. Rather I wish to leave with you the belief that not only are representatives of the building public, who have to do with the design, with the construction, or with the inspection of dwelling construction, responsible for the lack of fire-stopping precautions in our dwellings but that each home builder should be as careful that these precautions have been taken as he is in the selection of garments which he inspects for imperfections.

Second, that some such good methods as I have mentioned is more important than the fire-stopping material. Third, all opportunities to fire-stop should be taken in order to make it complete. Partial fire-stopping is not much better than no fire-stopping. Full fire-stopping properly placed affords maximum security to those who dwell within and guarantees minimum damages in case of fire, and is inexpensive to install when building.—*Building Age and Builders' Journal.*

STATEMENT BY FRANKLIN D. ROOSEVELT, PRESIDENT OF THE AMERICAN CONSTRUCTION COUNCIL

28 West 44th Street, New York

The American Construction has reached a stable basis in its service to the construction industry of the country and its relation to the public, to which the efforts of Mr. Dwight L. Hoopingarner, who has served as its Executive for some time, have contributed in a large way. Having gone through the formative

Architect taking bids due September 2nd.

## Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., August 14, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., September 15, 1924, for the construction, including mechanical equipment and approaches, of a (one-story brick and tile semi-fireproof) Post Office building (approximately 55x65 feet in size) at Washington, Ct. H., Ohio. Drawings and specifications may be obtained from the Custodian of the site at Washington Ct. H., Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### ADVERTISEMENT FOR THE CONSTRUCTION OF BUILDINGS FOR A NEW DETENTION HOME FOR JUVENILES, CAMDEN COUNTY

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct and equip a New Detention Home for Juveniles, consisting of a main building and garage, located as shown on Plot Plan, in Township of Pennsauken, County of Camden, New Jersey, for the County of Camden, will be received and opened by the Chairman of the Committee on Detention Home, in the Meeting Room of the Board of Chosen Freeholders, in the Court House, Camden, New Jersey, on the fourth day of September, 1924, at two o'clock P. M., Daylight Saving Time.

The work for which proposals are hereby invited, and for which bids will be received covers the complete construction of the above mentioned buildings, including Heating, Plumbing and Electrical Work.

The right is reserved to accept or to reject any or all proposals or to waive any formality in any proposal presented. All bids must be in sealed envelopes endorsed "Pro-

posal for Camden County Detention Home for Juveniles" and stating the branch of work covered. No bid will be considered unless accompanied by a certified check to the order of the County of Camden, or cash in amount of 10% of the bid (the certified check or cash to accompany the bids). In case the bid is less than \$5,000.00, said check or cash must not be less than \$500.00, and also a statement from a surety company that it will provide the contractor with a bond, binding the bidder to execute a contract if awarded to him. The terms of the proposal with surety Required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the Office of the Architects, Benjamin Howell Lackey and Joseph Norman Hettel, No. 5 Hudson Street, Camden, N. J. A limited number of copies of the plans and specifications will be loaned to prospective bidders.

Plans and specifications must be returned with bid.

County of Camden, a municipal corporation of New Jersey, by the Committee of the Board of Chosen Freeholders on Detention Home.

FRANCIS G. RIGGINS,

Chairman.

BENJAMIN HOWELL LACKEY,  
JOSEPH NORMAN HETTEL,

Architects.

(Continued from Page 532)

stages, the Council is now established with definite lines of activity to follow. These have to do especially with national conferences representative of the entire industry throughout the country held at various times to call the attention of the public to marked tendencies in construction activities, with the general promotion in their national phases of such work as apprenticeship, better building and responsibility in the financing of building operations, and with the furthering of the organization of new building congresses in important centers of the country.

In connection with the announcement that Mr. Hoopingarner has recently become Director of the New York Building Congress, which represents the same idea for the metropolitan New York district that the American Construction Council does for the construction industry nationally, I wish to state that the Council's activities will be under the direction of a committee of officers at headquarters and will continue to receive the general supervision of Mr. Hoopingarner, who in addition to having been its Executive is also serving as chairman of its committee on general activities. In this work he will have charge of the plans for the national conferences and other appropriate activities, keeping in touch with the Council's work throughout the year, and will have the advice and support of the Council's Treasurer, Mr. Wright D. Goss, and myself as President.

This step is in line with the Council's established policy of close accord with the various local building congresses and other organizations within the industry

and it will furnish the medium for insuring the cordial relationships between the Council and the congresses and other agencies which should exist in their daily operation as well as in spirit.

Better Homes in America was organized to try to give to all, regardless of the size of the family purse, the utmost in beauty, comfort, and utility in their homes. As is well known now, Better Homes in America is absolutely non-commercial in character.

As a means of extending its benefits as widely as possible, the directors of the organization have authorized the preparation and publication of a number of booklets on subjects of vital interest to home makers, specializing on those whose incomes will not permit lavish spending of money.

With this purpose in view, Mrs. Chas. Bradley Sanders, a well known authority in her field, was commissioned to prepare a booklet for Better Homes in America on "How to Furnish the Small Home."

This pamphlet was prepared with two purposes in view. The first was to help individual owners of small houses who seek to make their homes as attractive and homelike as their means will permit. To them it offers the essential rules of furnishing and decoration. The pamphlet contains suggested list of furniture, floor-coverings, curtains, pictures, and other furnishings which should increase the range of their choice. Without such a list, materials which are less appropriate and needlessly expensive might be selected.

The second purpose is to provide a handbook for the furnishing and decoration of the demonstration homes erected or remodeled as a part of the educational campaign of Better Homes in many hundreds of communities and demonstrated during Better Homes Week.

As Better Homes in America is strictly non-commercial in character, no profit is made on any of its publications. For that reason, the booklet on "How to Furnish the Small Home," is sold to those interested by national headquarters of the organization, 1653 Pennsylvania Avenue, Washington, D. C., at cost price, 25 cents.

The booklet treats in detail of the complete furnishings for a three-room house, a five-room house, and a seven-room house. To secure the proper furnishings in their entirety for a six-room house, one bedroom may be omitted from the furnishings given for a seven-room house, and similarly, a bedroom omitted from the specifications of the five-room house gives the requisite furnishings for a four-room house.

The booklet first takes up the preliminary considerations in furnishing any home—that the objects should suit the

house in size, coloring and style; that the pieces should be harmonious with one another; that they should be comfortable and well made; that they suit the requirements of the family; and that they fit the family purse.

The booklet deals with the subject of backgrounds, floors, floor varnishes and floor coverings, woodwork for the home in harmony with the scheme of furnishing it, curtains and draperies, the selection of furniture, lamps, ornaments, and the kinds of wood most commonly used in the manufacture of modern furniture.

The booklet then takes up the three-room house and the others in turn. It discusses the subject of the model kitchen, the home library, breakfast alcoves, the laundry, proper ways to set the table, linen, closet essentials, and contains a brief selected list of recommended books on the furnishing of the small home.

Dr. James Ford, Executive Director of Better Homes in America, in the foreword to the booklet, says, in part, as follows:

"Too often the furnishing of American homes include an accumulation of ugly, uncomfortable, and meaningless objects which would better be eliminated. This criticism applied particularly to the pictures, hangings, and ornaments, but often also to rugs and furniture. Too often also the tools and equipment of the home are needlessly meagre and inconvenient. The time and energy wasted in their use might be applied much more advantageously if they were replaced by labor-saving devices. One should not be the slave of his possessions but their master.

"Avoidance of waste and conservation of energy for life's higher purposes may then wisely be dominating principles in the selection of household furnishings precisely as they are in the other serious undertakings of life. But above all it should be remembered that the purpose of the house is to serve as the home of the growing family. I should then provide not only convenience for all household activities of kitchen and laundry but also rest and comfort and inspiration for the leisure hours."

It is part of the creed of Better Homes in America that inexpensive but attractive small homes should be accessible to all families. That is one of the main reasons why the 1924 competition in a thousand communities scattered throughout the nation, which culminated in the demonstrations of "better homes" during the week set aside for that purpose, laid special stress on homes for families of average or small means—homes in the \$5,000 class and vicinity.

Recognized authorities have repeatedly made the statement that America is in need of many hundred thousands more

houses of a type within the reach of wage earners' families. Housebuilding, like many other normal activities, was virtually arrested during the war period, and the shortage thus brought about has never been overcome.

The educational organization known as Better Homes in America aims to help in overcoming this housing shortage, and it is aware that prospective home owners need expert guidance and assistance. This organization is fully aware of the basic needs for small homes—a good house plan drawn by a competent designer, to insure sound construction and sensible planning in the building of even the smallest house.

For this reason, Better Homes in America has published a booklet for the aid of prospective owners or builders of small houses—houses containing up to six rooms. This booklet, called "Plan Book of Small Houses," was prepared for them by the Architects Small House Service Bureau.

As Better Homes in America is non-commercial and purely educational in character, these plan books are distributed to those writing in for them to national headquarters, 1653 Pennsylvania Avenue, Washington, D. C., at the bare cost of issuing them, 25 cents each.

The "Plan Book of Small Houses" contains floor plans, descriptions, and excellent pictures of twenty-four attractive and approved houses, ranging from three-room cottages and bungalows to six-room two-story houses.

The types included are the English cottage, the Cape Cod bungalow, Italian style houses, Pennsylvania Colonial, Dutch Colonial, Spanish type houses, New England Colonial, and others.

This publication offers every one an opportunity to enjoy many of the privileges of architectural service at low cost.

The Architects' Small House Service Bureau is a professional non-profit making organization composed of many practicing architects from the leading architectural firms of the country. It is controlled by the American Institute of Architects and has the endorsement of the Department of Commerce of the United States. In purpose it is a public service.

The "Plan Book of Small Houses" published by Better Homes in America contains not only the floor plans, descriptions and pictures of the twenty-four different types of excellent small houses, but contains two interesting articles prepared for it by competent architects. Maurice I. Flagg, Director of Service of the Architects' Small House Service Bureau, has contributed an excellent and carefully thought out article on "Selecting a Home Plan," and the important considerations which precede building a house. Mr. Robert Taylor Jones, of the American Institute of Architects, who is

Technical Director of the Northwestern Division of the Architects' Small House Service Bureau, is the author of a practical article for the prospective small house builder on "Keeping Down Building Costs."

This plan book, and related publications of an educational character, of interest to home builders and home makers, are available now at cost prices from national headquarters of Better Homes in America, 1653 Pennsylvania Avenue, Washington, D. C.

### THE BUILDERS' CODE

*Code of Ethics Adopted by the Members of the Associated Building Contractors of Illinois*

The Builder considers his vocation worthy of respect and adulation as affording him distinct opportunity to serve society.

The Builder desires to improve himself increase his efficiency and enlarge his service and by so doing he expects to profit through and by such service.

The Builder realizes that he is a business man and ambitious to succeed, but that, first he must be ethical and wish no success that is not founded on justice and morality.

The Builder holds that he must exchange his product, his labor, his service, and his ideas for profit. He wants that profit to be legitimate and ethical and desires all parties in the exchange benefited.

The Builder wants to be an example to his brother builders and uses his best efforts to elevate the standards of his vocation, and conduct his affairs that, others may find it wise profitable, and conducive to happiness.

The Builder wants to conduct his business so as to render perfect service, superior to his competitors, and, when in doubt, give service beyond the strict measure of obligation.

The Builder believes in the Golden Rule: "All things, whatsoever ye would that men should do unto you, do ye even so unto them."

The Builder contends that, society best holds together, when equal opportunity is accorded all men.

**There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.**

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## As The Editor Sees It

### THE PHILADELPHIA BUILDING EXPOSITION

As a result of several meetings among various foremost manufacturers of materials entering into Building Construction and equipment industries a co-operative movement has been launched to give to Philadelphia, its Architects, Contractors and Builders an exhibit of these materials and service. This movement crystalized into the Philadelphia Building Exposition which will be held at the Arena, Market Street, 45th to 46th, during the period September 20th to 27th, 1924.

The Committee consists of Mr. E. F. Glore, of Abram Cox Stove Company, Jr., John E. Lloyd, of Wm. M. Lloyd Lumber Company; I. B. Blain, of Asbestos Shingle Slate & Sheathing Co.; J. Randall Williams, Jr., of Williams Lumber Co.; J. R. Ross, of Gas Utilities Corp.; L. M. Whitcraft, of Portland Cement Association; W. S. Hays, of National Slate Ass'n.; John L. Wansor, of the Electric Club of Philadelphia; J. Harold Way, of Way Works, Inc.; D. Knickerbocker Boyd, Consulting Architect.

It has been an admitted fact that Expositions previously held in Philadelphia under the old promotion plan, with the usual appeal to vast numbers with special entertainment and amusement features were not conducive to sales and the fact that many catch penny schemes were in evidence on the floor lowered the en-

tire character of the Exposition. The Philadelphia Building Exposition is being held to fill a certain niche along the requirements of material men with a view of making its appeal to the buyers in such a manner as will obviate the necessity of holding more than one Exposition yearly.

The Electric Club of Philadelphia have agreed to use, among its members, the entire allotment of booths allowed this important industry and the buyers of electrical equipment of all types will enjoy viewing the most comprehensive electrical exhibition ever held here.

Mr. Glore, of Abram Cox Stove Company, has taken personal charge of the heating industry, and all prominent steam, hot water, vapor and warm air systems will be displayed in connection with gas ranges and water heating devices. Coal, oil and gas burning equipment have secured locations.

Mr. John E. Lloyd, of Wm. M. Lloyd Lumber Company, has secured the co-operation of lumber dealers to formulate an instructive display of various lumber, mill work, wall board and other material handled by this important branch of building construction.

The Cement Industry will be much in evidence and thoroughly reliable cement block, cement brick and ornamental cement work will be shown.

A co-operation of clay brick and clay products, slate and its uses, asbestos shingle and pipe covering and many de-

vices to enhance the beauty of buildings and increase the value of property will be shown for the first time.

While the directing Manager of the Philadelphia Building Exposition has his office, 604 Real Estate Trust Building, the Exhibitors meet from time to time to go over the matter of policy and the spirit of co-operation is welded into a foundation that will bring the Philadelphia Building Exposition with the realization of its ideals into a permanent yearly event.

Many new and novel features that will appeal to a type of visitor usually impossible to attract to an ordinary show—a class appeal rather than a mass appeal—where the interested persons of the entire trade will meet for their mutual benefit.

Daily talks will be given by men foremost in their respective lines and each day will bring its quota of information to the progressive Architect, Contractor, Builder and owner.

The accessibility of the Arena and the elegant parking facilities are factors which make this location valuable. Elevated service from Jersey Ferries and suburban Philadelphia is unequalled. The construction of the new type booth and the well balanced decoration shows the deep interest taken in the matter of detail that will reflect credit on all exhibitors as well as on the men responsible for putting across this grand project.

"The Philadelphia Building Exposi-

tion," says D. Knickerbacker Boyd, the Consulting Architect, "by the fact of making only one worth while exhibit necessary per year, will tend to lower prices of everything entering the building field, and while the Philadelphia Chapter of American Institute will not officially endorse any exhibit due to the fact that they would not consider it entirely ethical, however, the theory and purpose of the Philadelphia Building Exposition is an elegant one and one that will be viewed with much interest by all progressive persons."

"The firms that have already secured space at this Exposition," says Mr. Hedrick, cover the entire list of industries, and we have but few locations not contracted for. The Philadelphia Exposition is already a decided success and everyone connected with the project is pleased with the manner in which the display booths have taken and there are but a few booths now available."

One of the outstanding features of this Exposition is the fact that applications for space must be passed upon by the committee after the approval of the sub-chairman who has control of the division under which the prospect desires to exhibit. "This method," says Mr. Glore, "gives us a type of exhibitor, that, even though he be a competitor, we welcome him and his clean business methods and the aggregation of such high type business houses and men strengthen the scope that the Philadelphia Building Exposition aims to set for its goal among the various interested lines."

This Exposition has all the earmarks of a wonderful business getting proposition that will bring direct sales as well as direct advertising where the visitor can see merchandise and the exhibitor can get an interview with his prospect under conditions that are ideal for closing business.

September 20th to 27th was selected as an ideal time to hold such a show, due to the fact that the summer drag is just about over and a resumption of the industries are ready to go ahead on a constructive basis.

## THE BUGBEAR OF EXCESSIVE COST

One persistent bugbear that does more than anything else to hamper progress on both brick and hollow tile in building operations is that groundless idea in the minds of the public that it costs so much to build a brick or tile house that only the very rich can afford it. It may be that this bugbear is fed on propaganda of promoters of other building material, but whether that is so or not, the fact remains that every home builder seems to have the impression it will cost too much to build with brick or hollow tile, and that the only thing he can afford to build is a frame home.

We get plenty of evidence of this in the reports of building permits in the big cities which show such a majority of permits for frame homes as to be rather astonishing, in view of the present high cost of lumber and the need to build for greater permanence so as to get an assurance of return value for the cost of home building today. One reason is, that not only the builder himself but quite often the carpenter contractor, who is more familiar with lumber, has the impression that to build the walls of brick and hollow tile will add so much to the cost as to make it prohibitive except for wealthy people.

There is an illustration of this in some of the reports of the Promotion Committee of the Hollow Building Tile Association, where one member of the committee wanted to build a home for himself, using the plan design of a frame house. The carpenter contractor, when asked for a figure, made an off-hand estimate that it would cost 30 per cent. more. In other words his impression was that to build a hollow tile or brick or combination of the two would add nearly a third to the cost of the home. In this case the committee member said that finally, in going into the details of construction, it was found that the house could be built of common brick and hollow tile at an

*A cast iron, sectional feed, up-draft, low water line (50"), smokeless boiler. Easy to install, simple to operate, exceptionally durable*

ST. BERNARD'S SCHOOL, CHURCH AND PARISH HOUSE, BRADFORD, PA.

*All three buildings heated by one installation of three No. 8-40 Novelty Carburetor Boilers. Radiation, 13,000 Sq. Ft.*

*Architect: North-Shelgren-Swift, 511 Crosby St., Buffalo, N. Y.*

*Heating Contractor: W. Hugh McQuilken, Bradford, Pa.*

## How the Architect Solved this Problem

The architect faced a trying situation in planning the new School Building for St. Bernard's Parish, Bradford, Pa.

The Church, about 150 feet away from the site of the School, was fitted with a steam heating system. The Parish House, about 300 feet away from the School site, was equipped with hot water heat. In the interests of economy and convenience it was found desirable to combine these two dissimilar heating systems with the new heating system to be installed in the School.

The architect solved his problem with utmost satisfaction, thanks to the adaptability of the Novelty Carburetor Boiler. The hot water pipes and radiators in the Parish House were not disturbed—the water is heated by steam from the Carburetor Boiler. The radiating system in the Church was simply disconnected from the old boiler and connected to the Novelty through underground mains. All three buildings are assured of all the heat required, even on the coldest days, yet on warm days or days when one or two of the buildings are not in use, no fuel is wasted, because any of the three Novelty No. 8-40's can be shut down as desired.

A side-feed, sectional boiler, the Novelty is admirably adaptable to large buildings. The Carburetor Chambers (one to each section) on the rear of the boiler, automatically mix all smoke, soot and carbon with oxygen from the air and burn them. The air enters top and bottom slots in the rear of each carburetor, as shown in the picture. No adjustment of air intake is necessary. Rate of combustion determines amount of air required.

*Write for illustrated and descriptive booklet giving worth-while facts about space-saving, low water line of 50", long life and fuel saving.*

Owner taking bids due September 16th.

## Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., August 14, 1924. SEALED PROPOSALS will be opened in this office at 3 P. M., September 15, 1924, for the construction, including mechanical equipment and approaches, of a (one-story brick and tile semi-fireproof) Post Office building (approximately 55x65 feet in size) at Washington, Ct. H., Ohio. Drawings and specifications may be obtained from the Custodian of the site at Washington Ct. H., Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 548)

additional cost of approximately \$750 more than if built with frame walls.

This and other incidents encountered in the rounds serve to show plainly that one of the great needs of the day is to disabuse the public mind of this bugbear of excessive cost. There is need for an educational campaign on the part of the clayworking industry everywhere, and on the part of those doing nationwide advertising to impress two things. First, the economy in the final analysis of building with permanent building material. Second, to demonstrate that there is no such widespread difference in the cost between permanent building and frame construction as the public seems to imagine. Once the public gets rid of this bugbear idea of excessive cost it will be much easier going for the clay-working industry among the home builders of the country, both in the cities and out on the farms.—*The Clay Worker.*

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

## Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

## For Permanently Hard and Waterproof Concrete

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

Stock carried by The Van Sciver Corporation, Parkway at 24th Street, Philadelphia.
